

**DE00405/Umstead State Parks Bridge Replacement Project –
Topics of Discussion from Pre-Bid Meeting 2/12/26**

The following Topics were discussed at today's Pre-Bid Meeting:

1. Important Contracts Dates, which can all be found within the Proposal.
2. Site location information within Umstead State Park, existing conditions with photos, and potential construction access points.
3. Concerns of Contractors present at meeting regarding driving Piles so close to overhead power lines at bridge site. NCDOT Plan Revisions have been made in response to these concerns and are posted to the Division 5 Letting website.
4. It was noted that Contractors should prepare their own Materials Takeoffs, as the Lumber being provided by the State Parks is only a list of the lumber previously purchased for a planned maintenance project. Any lumber materials needed beyond the list provided by the State Parks is to be supplied by the selected Contractor.
5. The Utilities Coordinator will provide info on Utilities located within/around the project site at the Pre-Construction Meeting. (Please See the 'Notes to Contractor' Section of the Proposal).
6. The selected Contractor will be provided with a Gate Key by the State Parks personnel as listed in the 'Notes' to Contractor' Section of the Proposal. Contractor will have 24/7 access to the site once construction begins, however, please note the appropriate Time Restrictions listed in the Proposal for Any Roads surrounding the bridge site.
7. With direction from the Resident Engineer, the Contractor *may* be able to use additional Pedestrian Channelizing Devices and/or Safety Fence (as part of the Temporary Traffic Control SP) to block the Private Greenway entrance to the Trail that ties into Poyner Road. Please note, this must be done within the State R/W area.
8. NCDOT (Project Manager Sara Sherman) will contact the City of Raleigh before construction begins to alert the Public of the upcoming Greenway closure.
