NOTES

1. Refer to "Roadway Standard Drawings NCDOT" dated January 2024 and "Standard Specifications for Roads and Structures" dated January 2024.
2. Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
3. Phase 1 may be lagged.
4. Set all detector units to presence mode.
5. Locate new cabinet so as not to obstruct sight distance of vehicles turning right on red.
6. Remove existing Right Arrow "ONLY" sign (R3-5R) along southbound approach of SR 1007 (Randleman Road).
7. This intersection uses video detection. Install detectors according to the manufacturer's instructions to achieve the desired detection.
8. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timnig values supersede these values.
9. Renumber existing signal head 22 to 62.

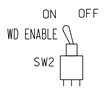
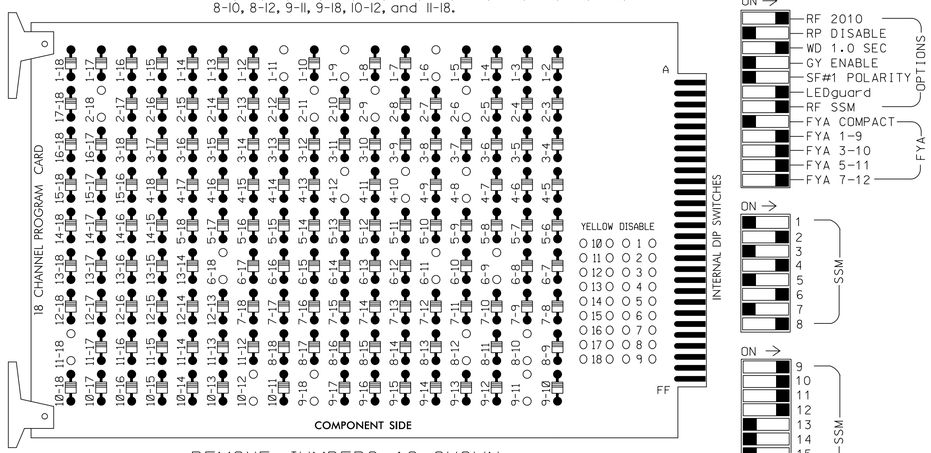
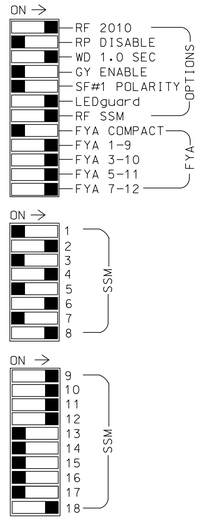
(remove jumpers and set switches as shown)



REMOVE DIODE JUMPERS I-6, I-9, I-11, 2-6, 2-9, 2-11, 2-18, 4-8, 4-10, 4-12, 6-9, 6-11, 6-18, 8-10, 8-12, 9-11, 9-18, 10-12, and 11-18.





REMOVE JUMPERS AS SHOWN

■ = DENOTES POSITION OF SWITCH

NOTES:

1. Card is provided with all diode jumpers in place. Removal of any jumper allows its channels to run concurrently.
2. Ensure jumpers SEL2-SEL5 and SEL9 are present on the monitor board.
3. Ensure that Red Enable is active at all times during normal operation.
4. Ensure Conflict Monitor Ethernet port is connected to a Switch port located within the cabinet.

LOAD RESISTOR INSTALLATION DETAIL

ACCEPTABLE VALUES	
VALUE (ohms)	WATTAGE
1.5K - 1.9K	25W (min)
2.0K - 3.0K	10W (min)

NOTES

1. To prevent "flash-conflict" problems, insert red flash program blocks for all unused vehicle load switches in the output file. The installer shall verify that signal heads flash in accordance with the Signal Plans.
2. Initialize database in Naztec 2070 local software (Apogee) as FULL-CALTRANS. This initialization should be done prior to programming controller.
3. Initialize I/O "C1-C11-ABC IO Mode" to USER (MM 1-8-6). Then set "Init 2A" to MODE 5 (MM 1-8-9-3).
4. Program phases 2 and 6 for Start Up In Green.
5. Program "Start Up Flash" for 0 sec. The conflict monitor will govern start-up flash time.
6. Program "Start Red Time" for 6 sec.
7. Ensure "Local Flash Start" feature is set to "RSt"
8. Ensure "InhFYARedSt" feature is set to "ON".
9. Ensure "Flash Mode" is set to "Channel" (MM 1-4-1).
10. Ensure all channels are programmed to flash Red (MM 1-8-1)
11. Program controller to provide a 1 second delay on the Flash Sense/Local Flash input. Use the following logic statement to provide this functionality:

FROM MAIN MENU->1->8->7 (I/O LOGIC)

```
Result Src.Fcn    TimeOp Time
I208  =  01208    DLY      1
```

12. Program phases 4 and 8 for dual entry.
13. The cabinet and controller are part of the Greensboro Signal System.

NOTES

1. Refer to "Roadway Standard Drawings NCDOT" dated January 2024 and "Standard Specifications for Roads and Structures" dated January 2024.
2. Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
3. Phase 1 may be lagged.
4. Remove existing signal heads numbered 24 and 43.
5. Reposition all existing signal heads.
6. Set all detector units to presence mode.
7. Omit "WALK" and flashing "DON'T WALK" with no pedestrian calls.
8. Program pedestrian heads to countdown the flashing "Don't Walk" time only.
9. Remove existing Right Arrow "ONLY" sign (R3-5R) along northbound approach of SR 1007 (Randleman Road).
10. The Division (City) Traffic Engineer will determine the hours of use for each phasing plan.
11. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timnig values supersede these values.
12. Lane control signs A and B may be removed at the discretion of the Division Traffic Engineer

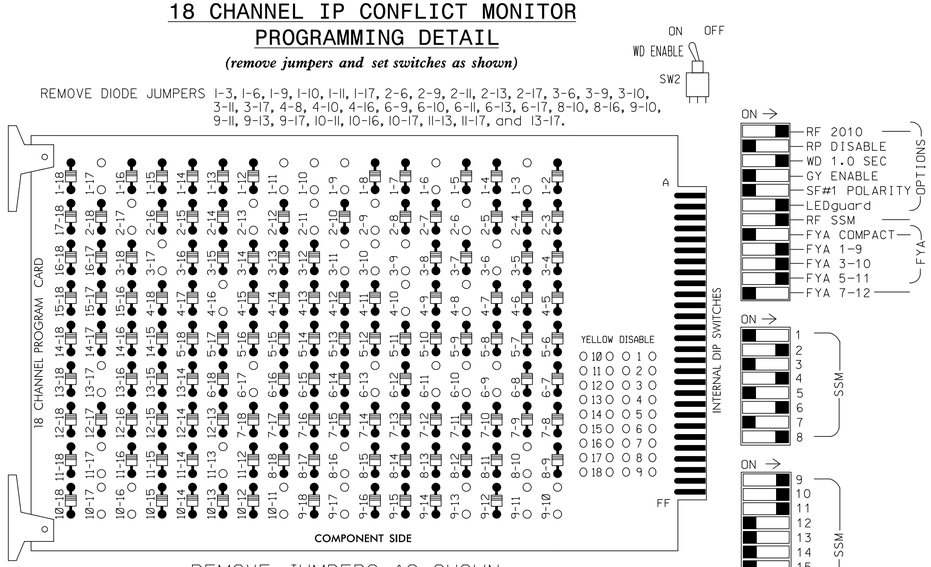
18 CHANNEL IP CONFLICT MONITOR PROGRAMMING DETAIL

(remove jumpers and set switches as shown)

REMOVE DIODE JUMPERS I-3, I-6, I-9, I-10, I-11, I-17, 2-6, 2-9, 2-11, 2-13, 2-17, 3-6, 3-9, 3-10, 3-11, 3-17, 4-8, 4-10, 4-16, 6-9, 6-10, 6-11, 6-13, 6-17, 8-10, 8-16, 9-10, 9-11, 9-13, 9-17, 10-11, 10-16, 10-17, 11-13, 11-17, and 13-17.



REMOVE JUMPERS AS SHOWN

■ = DENOTES POSITION OF SWITCH

NOTES:

1. Card is provided with all diode jumpers in place. Removal of any jumper allows its channels to run concurrently.
2. Ensure jumpers SEL2-SEL5 and SEL9 are present on the monitor board.
3. Ensure that Red Enable is active at all times during normal operation.
4. Ensure Conflict Monitor Ethernet port is connected to a Switch port located within the cabinet.

NOTES

1. To prevent "flash-conflict" problems, insert red flash program blocks for all unused vehicle load switches in the output file. The installer shall verify that signal heads flash in accordance with the Signal Plans.
2. Initialize database in Naztec 2070 local software (Apogee) as FULL-CALTRANS. This initialization should be done prior to programming controller.
3. Initialize I/O "C1-C11-ABC IO Mode" to USER (MM 1-8-6). Then set "Init 2A" to MODE 5 (MM 1-8-9-3).
4. Program phases 2 and 6 for Start Up In Green.
5. Program "Start Up Flash" for 0 sec. The conflict monitor will govern start-up flash time.
6. Program "Start Red Time" for 6 sec.
7. Ensure "Local Flash Start" feature is set to "RSt"
8. Ensure "InhFYARedSt" feature is set to "ON".
9. Ensure "Flash Mode" is set to "Channel" (MM 1-4-1).
10. Ensure all channels are programmed to flash Red (MM 1-8-1)
11. Program controller to provide a 1 second delay on the Flash Sense/Local Flash input. Use the following logic statement to provide this functionality:

FROM MAIN MENU->1->8->7 (I/O LOGIC)

Result Src.Fcn	TimeOp Time
I208 = 0I208	DLY 1

12. Program phases 4 and 8 for Dual Entry.
13. The cabinet and controller are part of the Greensboro Signal System.

NOTES

1. Refer to "Roadway Standard Drawings NCDOT" dated January 2024 and "Standard Specifications for Roads and Structures" dated January 2024.
2. Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
3. Phase 5 may be lagged.
4. Set all detector units to presence mode.
5. Locate new cabinet so as not to obstruct sight distance of vehicles turning right on red.
6. Remove existing Left Arrow "ONLY" sign (R3-5L).
7. Omit "WALK" and flashing "DON'T WALK" with no pedestrian calls
8. Program pedestrian heads to countdown the flashing "DON'T WALK" time only.
9. This intersection uses video detection. Install detectors according to the manufacturer's instructions to achieve the desired detection.
10. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timnig values supersede these values.

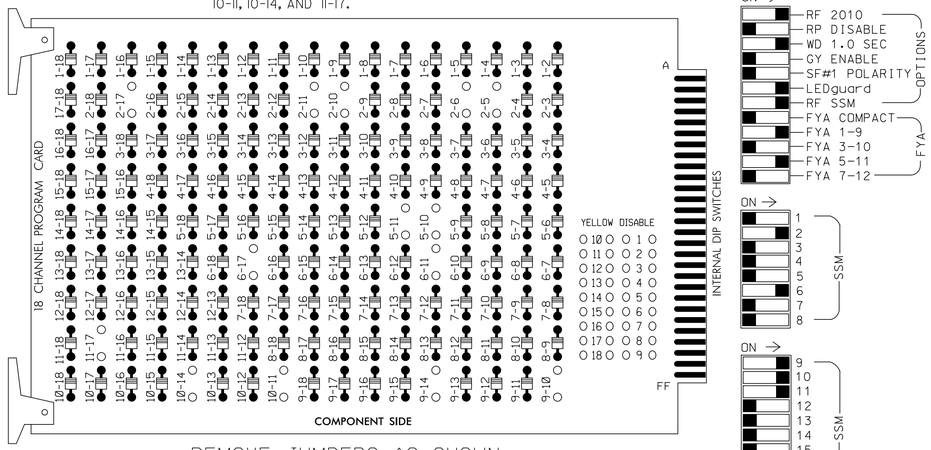
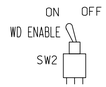
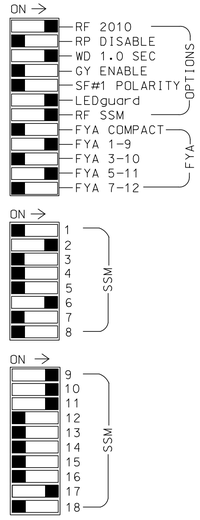
(remove jumpers and set switches as shown)

REMOVE DIODE JUMPERS 2-5, 2-6, 2-10, 2-11, 2-17, 5-10, 5-11, 6-11, 6-17, 9-10, 9-14, 10-11, 10-14, AND 11-17.



REMOVE JUMPERS AS SHOWN





■ = DENOTES POSITION OF SWITCH

NOTES:

1. Card is provided with all diode jumpers in place. Removal of any jumper allows its channels to run concurrently.
2. Ensure jumpers SEL2-SEL5 and SEL9 are present on the monitor board.
3. Ensure that Red Enable is active at all times during normal operation.
4. Ensure Conflict Monitor Ethernet port is connected to a Switch port located within the cabinet.

NOTES

1. To prevent "flash-conflict" problems, insert red flash program blocks for all unused vehicle load switches in the output file. The installer shall verify that signal heads flash in accordance with the Signal Plans.
2. Initialize database in Naztec 2070 local software (Apogee) as FULL-CALTRANS. This initialization should be done prior to programming controller.
3. Initialize I/O "C1-C11-ABC IO Mode" to USER (MM 1-8-6). Then set "Init 2A" to MODE 5 (MM 1-8-9-3).
4. Program phases 2 and 6 for Start Up In Green.
5. Program "Start Up Flash" for 0 sec. The conflict monitor will govern start-up flash time.
6. Program "Start Red Time" for 6 sec.
7. Ensure "Local Flash Start" feature is set to "RSt"
8. Ensure "InhFYARedSt" feature is set to "ON".
9. Ensure "Flash Mode" is set to "Channel" (MM 1-4-1).
10. Ensure all channels are programmed to flash Red (MM 1-8-1)
11. Program controller to provide a 1 second delay on the Flash Sense/Local Flash input. Use the following logic statement to provide this functionality:

FROM MAIN MENU->1->8->7 (I/O LOGIC)

```
Result Src.Fcn    TimeOp Time
I208  =  01208      DLY     1

2. Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
3. Set all detector units to presence mode.
4. Phase 5 may be lagged.
5. Remove existing signal head 63.
6. Reposition existing signal heads 61 and 62.
7. Omit "WALK" and flashing "DON'T WALK" with no pedestrian calls.
8. Program pedestrian heads to countdown the flashing "Don't Walk" time only.
9. Remove existing Right Arrow "ONLY" sign (R3-5R).
10. The Division (City) Traffic Engineer will determine the hours of use for each phasing plan.
11. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timnig values supersede these values.

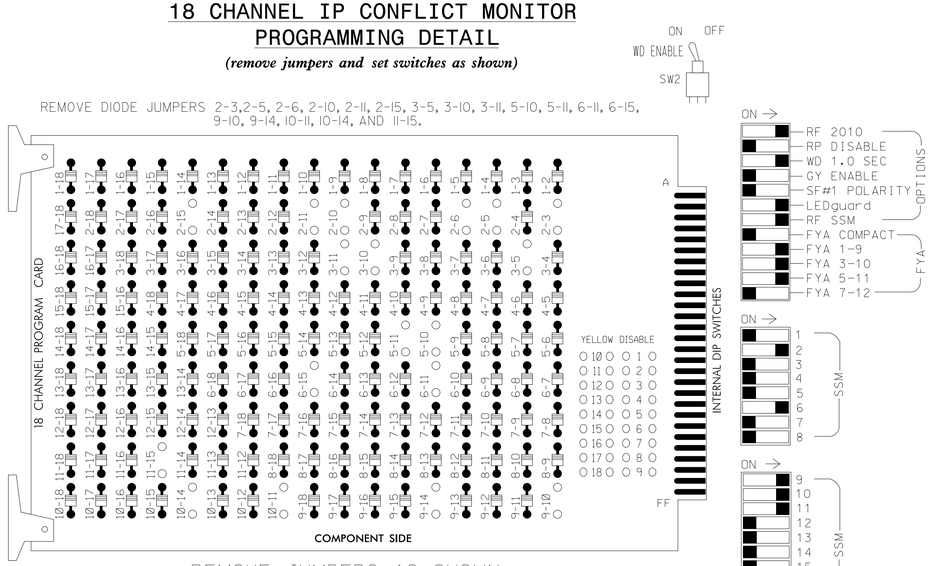
18 CHANNEL IP CONFLICT MONITOR PROGRAMMING DETAIL

(remove jumpers and set switches as shown)



NOTES:

1. Card is provided with all diode jumpers in place. Removal of any jumper allows its channels to run concurrently.
2. Ensure jumpers SEL2-SEL5 and SEL9 are present on the monitor board.
3. Ensure that Red Enable is active at all times during normal operation.
4. Ensure Conflict Monitor Ethernet port is connected to a Switch port located within the cabinet.

NOTES

1. To prevent "flash-conflict" problems, insert red flash program blocks for all unused vehicle load switches in the output file. The installer shall verify that signal heads flash in accordance with the Signal Plans.
2. Initialize database in Naztec 2070 local software (Apogee) as FULL-CALTRANS. This initialization should be done prior to programming controller.
3. Initialize I/O "C1-C11-ABC IO Mode" to USER (MM 1-8-6). Then set "Init 2A" to MODE 5 (MM 1-8-9-3).
4. Program phases 2 and 6 for Start Up In Green.
5. Program "Start Up Flash" for 0 sec. The conflict monitor will govern start-up flash time.
6. Program "Start Red Time" for 6 sec.
7. Ensure "Local Flash Start" feature is set to "RSt"
8. Ensure "InhFYARedSt" feature is set to "ON".
9. Ensure "Flash Mode" is set to "Channel" (MM 1-4-1).
10. Ensure all channels are programmed to flash Red (MM 1-8-1)
11. Program controller to provide a 1 second delay on the Flash Sense/Local Flash input. Use the following logic statement to provide this functionality:

FROM MAIN MENU->1->8->7 (I/O LOGIC)

```
Result Src.Fcn    TimeOp Time
I208  =  0I208    DLY      1
```

12. The cabinet and controller are part of the Greensboro Signal System.
