RE: **Questions/Concern & Answers/Clarifications**
Contract ID: DN00457
County: Clay, Polk, and Transylvania
Letting Date: April 12, 2016

Bidders have posed the following questions/concerns regarding this contract; the corresponding answers/clarifications are provided below each question:

1. QUESTION/CONCERN: "Under special provisions "milled Rumble Strips on Asphalt Concrete" Page 6-65, Article 665-1 Description – replace with the following: 'Construct rumble strips on asphalt concrete surfaces on either side of the snow plowable markers within the centerline markings in accordance with the plans and as directed by the engineer'. Plans call for 8" centerline rumble strips on NC 280 and US 276 but there only exists a detail for a 12" centerline cut. Please clarify that you are looking for an 8" rumble strip installed on the centerline that will produce the following condition. Double yellow line with a 6" gap sprayed over an 8" rumble strip which will result in approx. 1 inch of paint from each of the lines falling into the rumble strip."

ANSWER/CLARIFICATION: "That is correct. It was determined to go with 8" wide rumble strips with a decreased depth to try to mitigate the noise levels around residential areas."

Please insert this letter into the addendum section of the proposal and sign the verification.

Thank you for your attention to this matter.
