Acknowledgments

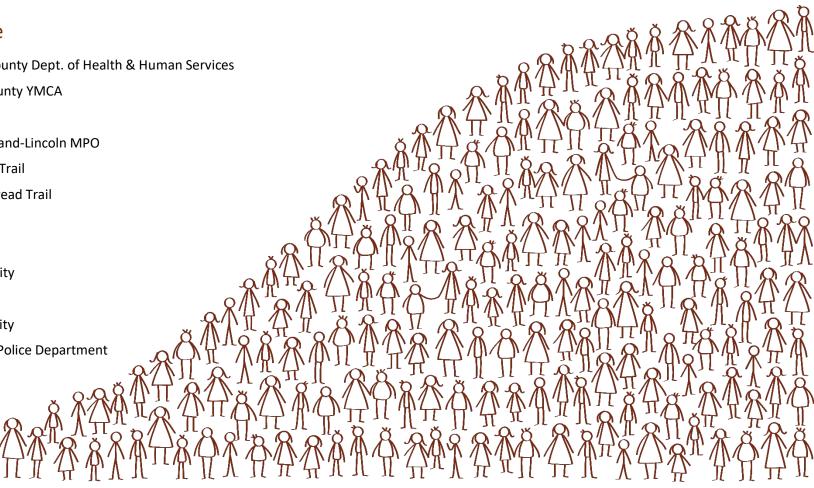

Thank you to the many residents, community leaders, and City staff who participated in the development of the Bessemer City Pedestrian Plan Update through meetings, workshops, and plan review. A special thank you to those who took on the added responsibility of serving on the Steering Committee.

Executive Summary

Bessemer City & Pedestrian Plan Update

Bessemer City ର୍ଙ୍ଗ Pedestrian Plan Update

The Bessemer City Pedestrian Plan Update adapts the recommendations of the 2010 Pedestrian Plan to the City's needs and context today. The Pedestrian Plan Update is centered on the following community vision:

Bessemer City will celebrate its family-oriented, small-town character by becoming a safer and more accessible place to walk for recreation and transportation.

Development of the Pedestrian Plan Update relied extensively on input from Bessemer City leaders, stakeholders, and residents through three Steering Committee meetings, two public surveys, and a community event. This input was incorporated into the plan's recommendations and plan for action.

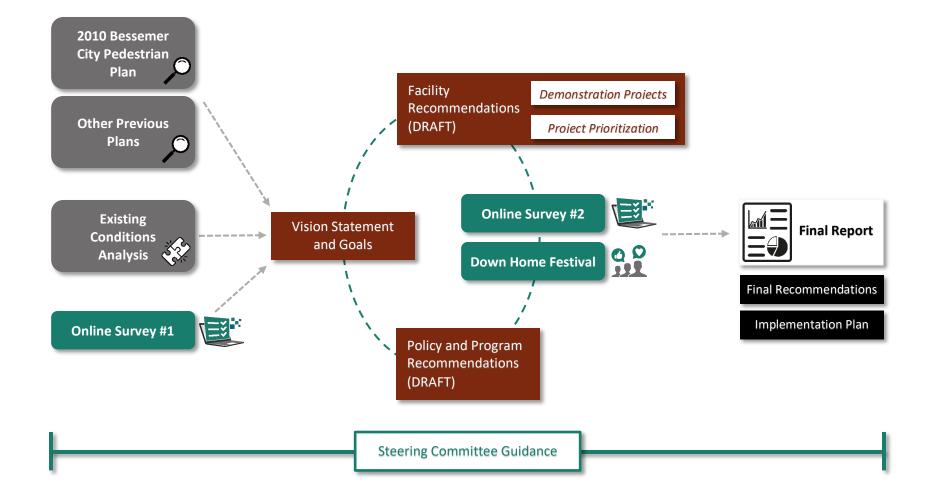

Many facility, program, and policy recommendations from the 2010 Plan remain, whereas others have been removed, edited, or added. All recommendations are explored in greater detail and prioritized according to what will be the most important to Bessemer City today and in the future.

Bessemer City has tremendous potential to become a truly walkable small town. Improving the pedestrian experience will contribute to the sense of community, safety, health, and the local economy in Bessemer City for years into the future. This plan guides investment toward achieving this vision.

Plan Overview

The following diagram describes each of the inputs and intermediate steps used to develop the Bessemer City Pedestrian Plan Update.

Summary of Priority Projects

Priority projects were selected based on public feedback, safety factors, significance to community accessibility, demographic factors, and cost effectiveness. More information about these projects, including scores for each category and cost estimates, can be found Chapter 5. Recommended pedestrian crossings can be found in Chapter 3.

Table ES.1 – Top Priority Projects (Sidewalks and Multi-Use Paths)					
Rank	ID	Project Description	Score (/100)		
SIDEW	/ALK	PROJECTS			
1	G	Sidewalk along E Maine Ave from N $14^{\rm th}$ St to NC 274	75		
2	В	Sidewalk along N $12^{\rm th}$ St from M L Kiser Rd to Sunset Ln	65		
3	L	Sidewalk along NC 161 from S 13^{th} St to W Boston Ave	60		
4	A	A Sidewalk along Yellow Jacket Ln/Bess Town Rd from N 14th St to N 12th St			
5	R	Sidewalk along NC 274 from N 9^{th} St to E Ohio Ave	56		
MULT	I-USE	PATH PROJECTS			
1	D	14 th Street Trail (W Maryland Ave to Windward Dr)	63		
2	Q	13 th Street Connector (W Alabama Ave to W Virginia Ave)	48		
3	S	Alabama Trail (S 14 th St to S 8 th St)	47		
4*	W	Virginia to Southridge Trail (E Virginia Ave/Davis St to Edgewood Rd/I-85)	36		
4*	т	Athenia and Edgewood Trail (S 8 th St to I-85)	36		

Summary of Programs and Policies

Supportive programs and policies are described in detail in Chapter 4 of this plan. To create a successful pedestrian network, Bessemer City should pursue as many of these programs and policies as time and resources permit.

Recommended policies and programs were grouped into five categories. Examples within each category are summarized below:

• Pedestrian-Supportive Policies

Such as including pedestrian facilities in future roadway projects, establishing a Pedestrian Needs Committee, and adopting a Complete Streets and Traffic Calming policy

• Strategic Coordination

Such as coordinating with the Carolina Thread Trail, coordinating with neighboring and surrounding jurisdictions, and identifying grant funding opportunities

• Maintenance and Assessment

Such as repairing and enhancing existing sidewalks, assessing and improving street lighting, and establishing a data-driven method of annual evaluation

• Encouragement

Such as community events, Safe Routes to School, and other school-based programs

Education

Such as awareness events and designations, wayfinding, and establishing a website for pedestrian facilities and needs in Bessemer City

Summary of Funding Sources

A key piece of the implementation plan (discussed in Chapter 5) are possible identified funding sources to accomplish the goals of this plan.

Funding sources that may be leveraged include:

- Local Funds
- Powell Bill Funds
- RAISE Grants
- Non-Profit Organizations
- Private Development
- Transportation Bonds
- Parks and Recreation Trust Fund

The NCDOT design guidelines are identified as the basis of design for all identified projects, detailed on page 5-10 of this report. These design guidelines include guidance from the Federal Highway Administration (FHWA), the American Association of State Highway Transportation Officials (AASHTO), the National Association of City Transportation Officials (NACTO) and others.

Bessemer City & Pedestrian Plan Update

CHAPTER 1

Introduction

Bessemer City & Pedestrian Plan Update

Bessemer City is a charming and friendly community located in the rolling hills northwest of Gastonia, with a distinctive charm as a historic rail town. Originally founded in 1893, Bessemer City developed along the major railroad that still runs through the city today. The trainoriented nature of the city contributed to a more pedestrian-friendly grid pattern with denser neighborhoods compared to other communities throughout the region. The City continues to build upon its reputation as a welcoming and historic community by improving the pedestrian environment and investing in mobility for residents and visitors.

Project History and Background

Bessemer City, like many other municipalities in North Carolina, strives to provide its residents with a high quality of life. Many communities aim to become more walkable by providing a safe, accessible, and enjoyable transportation option that promotes health and environmental quality. Amenities for pedestrians have come to be increasingly expected by residents, and their ability to contribute to community vibrancy is well documented.

Bessemer City has a long-standing desire to improve its pedestrian infrastructure. In 2010, the first Pedestrian Plan was adopted. Over a decade later, Bessemer City applied for and received a grant through the North Carolina Department of Transportation to reevaluate the goals and recommendations of this plan and update the analysis with recent data. Through the Bessemer City Pedestrian Plan Update, the City also takes a closer look at the projects that are most important to realizing the community's goals, including both large-scale and smallscale projects with the most impact.

Walking in Bessemer City in a Post-COVID-19 World

COVID-19 has changed many aspects of life, including how municipalities function and the types of improvements they are prioritizing. The Bessemer City Pedestrian Plan Update was conducted during the COVID-19 pandemic, which has emphasized the need to preserve and enhance the City's mobility options. As transportation needs continue to change, the Bessemer City Pedestrian Plan Update presents a roadmap toward a safer and more accessible pedestrian network, and outlines the steps needed to adapt to a continuously changing environment.

Chapter 1 | Introduction

FINAL ~ February 2022

Vision and Goals

As a guiding document, the Bessemer City Pedestrian Plan Update establishes a vision for walkability in the City and expresses a commitment to the five priorities expressed in the WalkBikeNC statewide bicycle and pedestrian plan.

Mobility

Align how walkable places connect

opportunities and make the City a more attractive place to invest.

Prioritize walkability among important corridors by identifying solutions that consider the unique role of each street and the land uses and destinations it serves.

Environment

Call attention to Bessemer City's natural resources and find ways to provide mindful access to residents and visitors.

Economy

Bessemer City will celebrate its family-oriented, small-town character by becoming a safer and more accessible place to walk for recreation and transportation.

<u>Safety</u>

Promote safety for everyone, regardless of their age, ability, income, or background.

<u>Health</u>

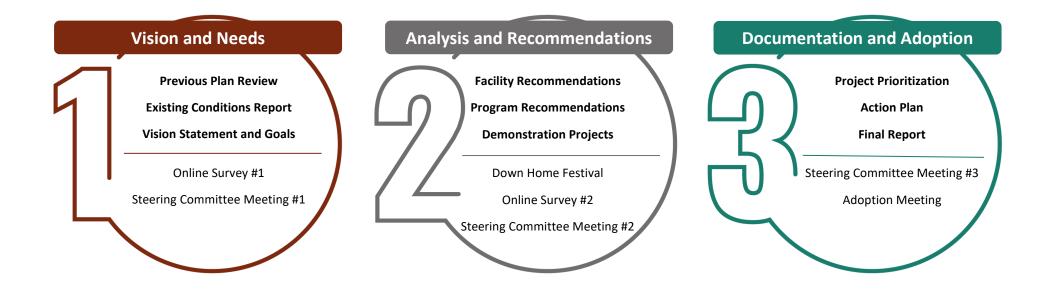

Emphasize how sidewalks, paths, and crossings can serve as an important component to the health and well-being of the people who live and work in Bessemer City.

To learn more about WalkBikeNC, visit <u>www.ncdot.gov/bikeped/walkbikenc</u>.

Planning Process

The planning process began in early 2021 and followed a three-step process that began with establishing the vision for walkability in Bessemer City and documenting existing conditions and local needs. From there, a coordinated set of recommendations emerged from an analytical and community-driven process. Finally, the plan took shape through documentation. Stakeholder and community engagement occurred throughout the three phases.

FINAL ~ February 2022

Community Engagement

For the Bessemer City Pedestrian Plan Update to reflect community values and be implementable, a community engagement process was needed to gather input from residents, business owners, agency representatives, and other stakeholders. Together, the community helped establish a vision for a more walkable Bessemer City, explore ways to achieve it, and prioritize a set of projects, programs, and policies to realize results. It was important to create a process that allowed participants to understand why decisions were made and the effect of those decisions as the plan took shape. Led by the project Steering Committee, the outcomes of the engagement process contributed significantly to the recommendations of this plan and helped enrich the results by ensuring the needs of the community were taken into consideration at every stage of the process.

Steering Committee

The Steering Committee served a critical role in guiding the project and contributing to decisions being made. The group was composed of a variety of local experts and officials, including representatives from the Planning and Zoning, Economic Development, Parks and Recreation, and Police Departments of Bessemer City, as well as Gaston County, Gaston-Cleveland-Lincoln Metropolitan Planning Organization (GCLMPO), the Carolina Thread Trail, NCDOT, and others. The Steering Committee had three distinct roles:

Assist with the creation of the Pedestrian Plan Update

Provide feedback on plan elements throughout the process

Provide local knowledge and insight

Steering Committee Meetings

• Meeting #1 | February 9, 2021

Committee members were briefed on the overall project timeline and planning process. The findings of the existing conditions analysis were presented to the committee for initial feedback. A corridor inventory was shared and discussed, which included some of the key corridors for pedestrian mobility in Bessemer City. The first public survey launched immediately following this meeting.

Meeting #2 | September 17, 2021

This meeting focused on presenting the recommendations identified by the project team and the prioritization methodology used. Preliminary demonstration project selections were shown to the committee, who provided feedback on which sidewalk, multi-use path, and pedestrian crossing recommendations would be featured in the report. Draft policy and program recommendations were also presented, and feedback was solicited.

Meeting #3 | December 8, 2021

Following the meeting, the Committee provided feedback on final recommendations and structure of the report and helped the project team prepare for adoption.

Community Input

The Bessemer City community weighed in on the Pedestrian Plan Update throughout the process. Two online surveys and participation at the Down Home Festival provided opportunities to collect input on vision, needs, recommendations, and priorities.

ENGAGEMENT SNAPSHOT

The chapters that follow feature key outcomes from the online surveys and many community conversations that were held during the planning process.

ONLINE SURVEY #1

February 9, 2021 to March 14, 2021

The first online survey to collect community input on which mobility themes were most important and what obstacles people faced when walking in Bessemer City. Participants also used an interactive map to identify specific issues and potential project ideas.

DOWN HOME FESTIVAL

May 8, 2021

The City reserved space at the Down Home Festival to showcase the Pedestrian Plan Update and collect input on recommendations. The event, which typically draws close to 5,000 people to Downtown, provided a festive way to engage people about the needs and solutions related to walking the City.

ONLINE SURVEY #2

May 6, 2021 to June 2, 2021

The second online survey launched in time for the Down Home Festival. The survey was designed to collect input on the draft project recommendations, inform the project prioritization process, and better understand the community's appetite for different types of programs.

Chapter 1 | Introduction

FINAL ~ February 2022

Benefits of Walking

The choices people have in how they move through their community is a key indicator for livability and vitality. Providing a safe and efficient pedestrian network gives residents an alternative to the automobile and helps to create a more efficient, healthier, and safer community. Walking as a means of transportation as well as recreation can benefit Bessemer City's mobility, safety, health, economy, environment, and quality of life. The Pedestrian Plan Update identifies numerous benefits for residents, businesses, and visitors that can be realized immediately and for years to come. Five of the six benefits listed here stem from the five pillars found in WalkBikeNC, North Carolina's Bicycle and Pedestrian Plan. The sixth benefit, quality of life, is often incidental and happens naturally as efforts are made to enhance mobility, safety, health, economy, and environment.

<u>Health</u>

1

Walking is a form of physical activity that can be accomplished by most citizens. Walking is a low-impact form of exercise that can reduce stress and diseases such as high blood pressure and obesity. Evidence exists that investment in bicycle and pedestrian infrastructure can reduce the amount spent on medical costs. A 2005 study completed by CDC

researchers in Atlanta, Georgia found an average \$2.94 medical savings return for every \$1 spent on bicycle and pedestrian infrastructure.¹

<u>Mobility</u>

Mobility is the equitable availability of transportation options for everyone. By providing the appropriate facilities, communities allow people to choose how they want to travel. For those who do not have the option to drive, such as adolescents, the elderly, those unable to

afford a vehicle, and people with certain disabilities, this lack of choice in transportation creates an inconvenient and socially unjust barrier to mobility. In 2017, the National Household Travel Survey showed that 40% of all trips, both commute and non-commute, taken by Americans are less than two miles, equivalent to a 30-minute walk. Walking can be an attractive travel mode for short trips that would otherwise be made by driving.

Key accessibility improvements also improve quality of life for residents with mobility challenges. Accessibility standards set by the Americans with Disability Act (ADA) are increasingly enforced. These standards require that city facilities provide gentle slopes, well defined landings, and wide smooth pathways. These are conveniences for able-bodied users, but essential elements for people with disabilities.

"A Cost-Benefit Analysis of Physical Activity Using Bike/Pedestrian Trails," Health Promotion Practice, Volume 6, Issue 2, pp. 174 - 179, 2005

Bessemer City & Pedestrian Plan Update

Economy

Walking is an affordable mode of transportation. Automobile ownership is expensive and consumes a major portion of many family incomes. And, households that cannot afford to own and operate a vehicle must walk or bicycle as a necessity. When safe facilities are provided for pedestrians, people can

walk more and spend less on transportation, meaning they have more money to spend on other things. Those who must walk by necessity feel safer and more comfortable when going about their daily activities.

<u>Safety</u>

Safe travel conditions result from effective design, enforcement, and education. Safety is a major reported obstacle to walking in Bessemer City and steps can be taken to further improve safety. In 2020, the Governors Highway Safety Association released pedestrian fatality counts for the first half of 2020

(January-June). North Carolina had 121 pedestrian fatalities during this time, placing it in the top five states for pedestrian fatalities.² Officials at the state and federal levels are making efforts to improve pedestrian safety. The North Carolina Department of Transportation (NCDOT) is increasing awareness of pedestrian and bicycle safety with the Watch for Me NC program. Watch for Me NC aims to use education, community engagement, and high-visibility enforcement to reduce the occurrence of pedestrian and bicycle injuries and fatalities.

Quality of Life

The walkability and bikeability of a community are indicators of its livability/quality of life. This factor has profound impact on attracting businesses and workers as well as tourism. In communities where people can regularly be seen out walking and biking, a sense exists that these areas are safe and friendly places to live and

visit. By providing appropriate pedestrian and bicycle facilities, communities enable the interaction between neighbors and other citizens that can strengthen relationships and contribute to a healthy sense of identity and place.

Environment

More people walking can result in lower levels of motor vehicle emissions, cleaner air, and stronger preservation of streams and open spaces. As Bessemer City implements the programs, policies, and infrastructure projects recommended by this plan, it is anticipated that a portion of trips that would have been made by

automobile, releasing harmful emissions, will instead be made on foot or by bike.

 ² "Pedestrian Traffic Fatalities by State: 2020 Preliminary Data," Governors Highway Safety Association, 2020.

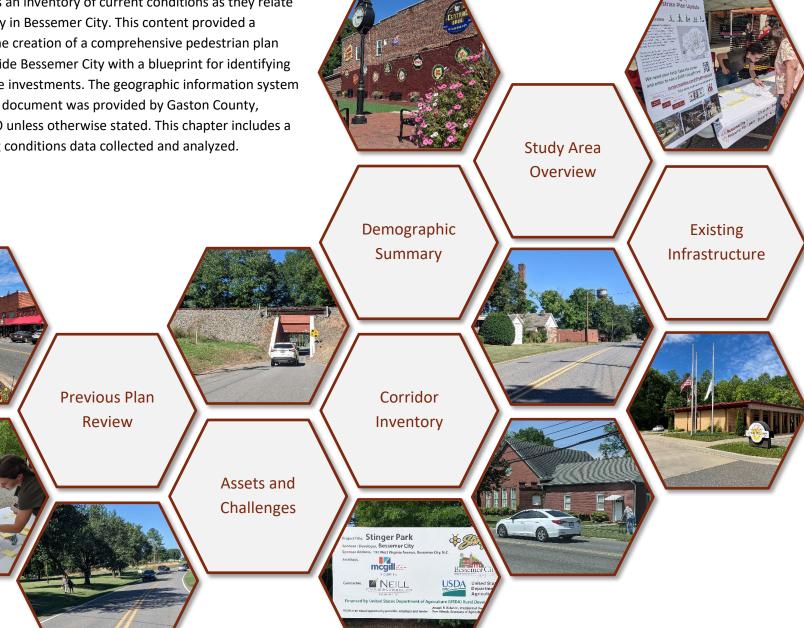

CHAPTER 2

Existing Conditions

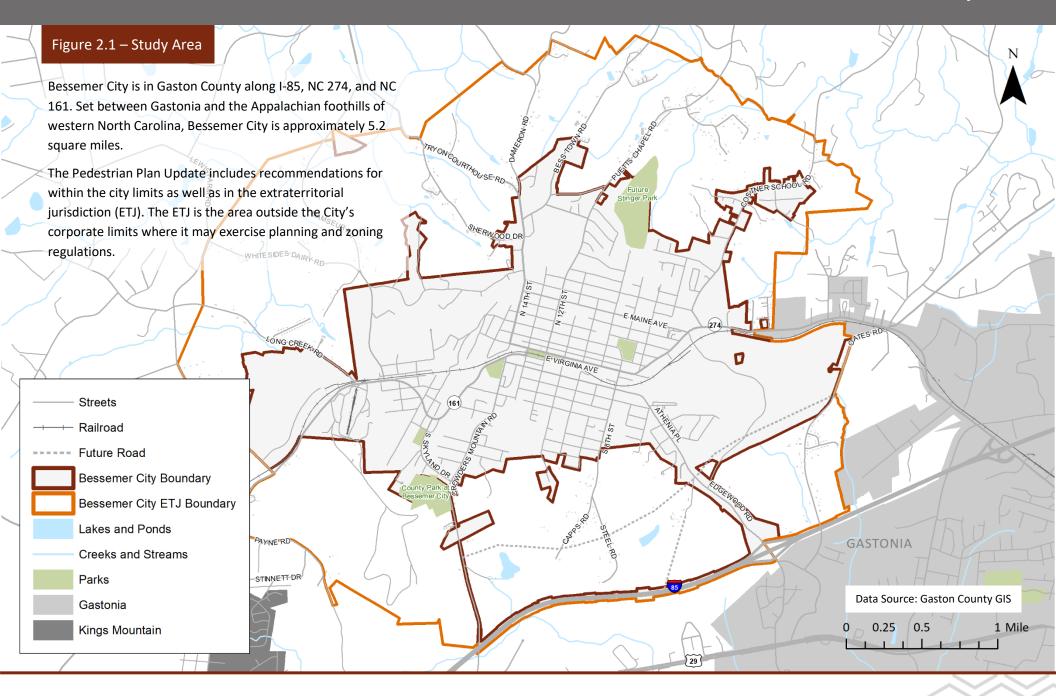

Bessemer City & Pedestrian Plan Update

Bessemer City 😽 Pedestrian Plan Update

This chapter provides an inventory of current conditions as they relate to pedestrian mobility in Bessemer City. This content provided a preliminary step in the creation of a comprehensive pedestrian plan update that will provide Bessemer City with a blueprint for identifying and prioritizing future investments. The geographic information system (GIS) data within this document was provided by Gaston County, NCDOT, and GCLMPO unless otherwise stated. This chapter includes a subset of the existing conditions data collected and analyzed.

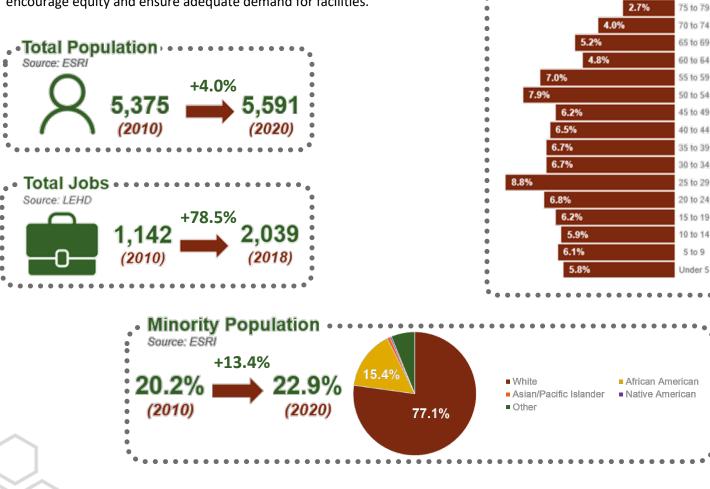

FINAL ~ February 2022

Bessemer City 😽 Pedestrian Plan Update

Overview

The demographic makeup of the community is crucial when considering walking as a means of active transportation in Bessemer City. This section uses 2019 American Community Survey 5-year estimates from the US Census Bureau to summarize relevant data for the community. This data helps to better understand the needs of the community in Bessemer City, and was used in the project prioritization process to encourage equity and ensure adequate demand for facilities.

Bessemer City ଙ୍ଗ Pedestrian Plan Update

Figure 2.2 – Households Without Vehicle Access, by Block Group

The percentage of households without access to a vehicle shown here by block group is taken from the ACS 2019 5-year estimates. The area with the highest percentage of households without access to a vehicle is between Athenia Place/Edgewood Road and NC 274, where 22.8% of households have no access to a vehicle. However, this block group overlaps with one of the least populated areas of the City. Within Bessemer City, more than 200 households do not have access to a vehicle.

FINAL ~ February 2022

Bessemer City & Pedestrian Plan Update

Figure 2.6 – Roadway Designation

When considering improvements to the pedestrian system, it will be important to consider and coordinate with the entity responsible for the maintenance of and investment in each facility. Nearly all Bessemer City maintained roads are considered local streets according to the NCDOT functional class system, while the City's state-maintained roads are typically of higher functional class. The appropriateness of pedestrian facilities may depend on both functional class and responsible entity.

FINAL ~ February 2022

Figure 2.7 – Current Land Use

Land use is an important when deciding where pedestrian improvements are needed. Commercial or residential areas may need more pedestrian facilities than agricultural or industrial areas. The most common land use types in Bessemer City are single-family residential and rural/agricultural land. Commercial activity is clustered along the eastern edge of the City along NC 274. Industrial land is common at the eastern and western ends of the City along NC 274 and NC 161.

Current Land Use

Bessemer City 😽 Pedestrian Plan Update

Figure 2.8 – Other Physical Considerations

Natural and manmade features need to be referenced during the Pedestrian Plan Update. FEMA 100- and 500-year floodplains for the creeks in Bessemer City should be considered as they may present development challenges. Rail crossings are limited, and the tracks can be a barrier to pedestrian connectivity in the city. The City's topography, such as the large hill west of Downtown, also poses a challenge to pedestrian accessibility. Existing utility easements shown here may present right-of-way opportunities for future trail connections. The City is currently (as of March 2021) compiling a comprehensive inventory of utility easements.

Assets and Challenges

A key part of the planning process involved identifying areas of opportunity and challenges to walking in Bessemer City. These Assets and Challenges were determined based on fieldwork analysis, guidance from the City, and input from the Steering Committee. Later, further feedback from the Steering Committee and the first public survey confirmed the understanding of Assets and Challenges.

Assets

Bessemer City has numerous assets that can contribute to the growth of the City's pedestrian network. These assets include characteristics of the community as well as attractive local destinations where residents and visitors gather.

- Bessemer City's street grid pattern supports walkability.
- Downtown businesses cater to pedestrians.
- Existing sidewalks and crosswalks connect many areas of the city, especially near Downtown.

Challenges

Understanding the pedestrian constraints in Bessemer City will help identify improvements that enhance safety and access for pedestrians of all ages and abilities.

- Outside of Downtown, existing sidewalks and crosswalks are sparse, as are ADA curb ramps.
- The railroad poses a major barrier to pedestrian connectivity in the city due to limited crossings and frequent trains (~3 to 5 per day).
- Resources are constrained.

Corridor Inventory

A review of the design characteristics for key streets in Bessemer City show a range of contexts and features that affect the comfort level for pedestrians. These same charactersitics have a bearing on how feasible or costly it will be to construct new sidewalks where gaps exists. Table 2.1 summarizes notable characteristics for seven key corridors in

Table 2.1 – Corridor Inventory								
Corridor		Typical Cross Section	Speed Limit	AADT (vehicles per day)	Curb & Gutter	Sidewalk		
						Coverage	Condition	Widths
Alabama Ave / Athenia Pl / Edgewood Rd	24 ft	2-lane undivided	35 mph	2,700 to 8,100	<25%	Limited	Fair	4 to 5 ft
NC 161	24 ft	2-lane undivided	35 mph	4,400 to 5,800	0%	None	N/A	N/A
Virginia Ave / NC 274	24 to 75 ft	2-lane to 6-lane	35 mph	4,500 to 13,000	25-50%	Complete	Good	3.5 to 7 ft
Maine Ave	24 ft	2-lane undivided	35 mph	4,800 to 8,200	0%	None	N/A	N/A
Washington Ave	30 ft	2-lane unmarked	35 mph	Data not available	25-50%	Complete	Fair	3.5 to 4 ft
12 th St	24 to 33 ft	2-lane undivided	35 mph	1,900 to 4,600	<25%	Complete	Fair	3.5 to 6 ft
14 th St	24 to 30 ft	2-lane undivided	35 mph	2,000 to 6,100	<25%	Limited	Poor	3 to 4 ft

Bessemer City. The Corridor Inventory table provides an at-a-glance overview of select roadway characteristics and pedestrian facilities.

FINAL ~ February 2022

Alabama Avenue/Athenia Place/Edgewood Road

This 2.1-mile section is a key corridor in Bessemer City, connecting the southern side of Downtown directly to I-85. Five blocks of sidewalks exist along Alabama Avenue; however, many are disconnected or in poor condition. Few sidewalks exist in Bessemer City south of the railroad tracks, limiting pedestrian connectivity.

Assessment

The following characteristics have been observed and present a challenge to walking along the corridor.

Lack of	Poor	Narrow/Worn	Low
Sidewalks or	Crossings	Sidewalks	Visibility
Connectivity			

NC 161

NC 161 connects Bessemer City to Kings Mountain. Approximately two miles of NC 161 is within the study area and carries 4,400 - 5,800 vehicles per day. The road provides access to Downtown, Bessemer City Park, Bessemer City Middle School, and other destinations on the west side of town. No sidewalks or shoulders exist along NC 161.

Assessment_

High Traffic Road The following characteristics have been observed and present a challenge to walking along the corridor.

Lack of	Poor	Narrow/Worn	Low	High Traffic
Sidewalks or	Crossings	Sidewalks	Visibility	Road
Connectivity				

Virginia Avenue/NC 274

This corridor runs from the heart of Bessemer City to I-85. Businesses along the corridor include small shops Downtown to large retailers to industrial/warehouse sites. Continuous sidewalks mostly exist along the entire corridor, including new sidewalks constructed since 2010. However, sidewalk gaps and a lack of safe crossings exist.

Assessment_

The following characteristics have been observed and present a challenge to walking along the corridor.

Lack of Poor Sidewalks or Crossings Connectivity

Narrow/Worn Low Sidewalks Visibility High Traffic Road

Maine Ave

Maine Avenue runs from N 14th Street to NC 274. The corridor lacks pedestrian facilities, but the mixed-use development allowed in the 2018 Zoning Map could make these more important in the future. Maine Avenue also lacks paved shoulders, making it especially dangerous for pedestrians.

Assessment_

The following characteristics have been observed and present a challenge to walking along the corridor.

Lack of	Poor	Narrow/Worn	Low	High Traffic
Sidewalks or	Crossings	Sidewalks	Visibility	Road
Connectivity				

Chapter 2 | Existing Conditions

FINAL ~ February 2022

Washington Avenue

Washington Avenue is a great option for pedestrians due to its lower traffic volume and good sidewalk connectivity. The 1-mile corridor passes through a mostly residential area with a few churches and other destinations, including Kevin Millwood Park. The road closely parallels the commercial activity along Virginia Avenue. Sidewalks are mostly quite narrow and sometimes worn. Crossings are limited.

Assessment_

The following characteristics have been observed and present a challenge to walking along the corridor.

Lack of	Poor	Narrow/Worn	Low	High Traffic
Sidewalks or	Crossings	Sidewalks	Visibility	Road
Connectivity				

12th Street

12th Street is one of Bessemer City's main north-south routes, connecting Downtown to Bessemer City High School, Bessemer City Central Elementary, and to residential areas south of Downtown. Existing facilities are present along the west side of 12th Street from Georgia Avenue to the entrance to the BCHS parking lot. The railroad tracks pose an additional barrier to pedestrians in this corridor.

Assessment_

The following characteristics have been observed and present a challenge to walking along the corridor.

Lack of	Poor	Narrow/Worn	Low	High Traffic
Sidewalks or	Crossings	Sidewalks	Visibility	Road
Connectivity				

Bessemer City & Pedestrian Plan Update

14th Street

14th Street is another important north-south connector in Bessemer City. It connects mostly residential areas and a few churches along a one-mile corridor between Downtown and the City's northern boundary. The only sidewalks present in this corridor are near Downtown on the west side of the street from Virginia Avenue to Ohio Avenue. A notable concentration of pedestrian crashes has been reported along this corridor.

Assessment_

The following characteristics have been observed and present a challenge to walking along the corridor.

Lack of Sidewalks or	Narrow/Worn Sidewalks	Low Visibility	High Traffic Road
Connectivity			

Chapter 2 | Existing Conditions

FINAL ~ February 2022

Previous Plan Review

Bessemer City Pedestrian Plan (2010)

Bessemer City developed its original Pedestrian Plan in 2010 to articulate the City's vision of being a more pedestrian-friendly city. Plan development included a physical survey, mapping and analysis of existing facilities, community engagement

including stakeholder interviews and a public meeting, and finally a report with prioritized project recommendations. The Plan also recommends revisions to City ordinances and supporting policies.

<u>Goals</u>

- Walkability/connectivity
- Vitality
- Aesthetics/identity
- Make Bessemer City a regional destination for visitors and businesses

Key Recommendations

- Proposed and estimated costs for 27 new sidewalk projects (including Alabama Ave/Athenia Pl/Edgewood Rd, Maine Ave, NC 161, and Southridge Pkwy), 26 trail projects, and 42 crosswalks
- Recommended programs such as community walking events, a sidewalk/trail program, and crossing guards

Small Area Plan for Downtown (2009)

Bessemer City's Small Area Plan for Downtown aims to provide a plan to revitalize the City's enviable downtown core. The SAP makes recommendations to help build on Bessemer City's strong urban "bones" (including its intact street grid system, a variety of authentic local businesses, and a distinct historic small-town Downtown) to make it a more attractive place for residents, businesses, and visitors.

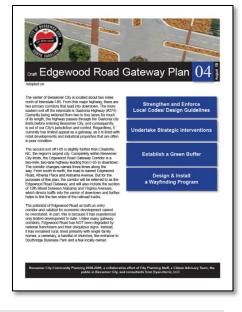

- Expand Downtown boundaries
- Extend streetscaping and establish new trails/bike paths/sidewalks
- Improve and program open space
- Improve landscape maintenance
- Establish a continuous sidewalk connection across the railroad tracks along 12th Street, including significant landscaping and lighting
- Establish a Historic District

Bessemer City 🕅 Pedestrian Plan Update

Edgewood Road Gateway Plan (2009)

The corridor of Edgewood Road / Athenia Place / Alabama Avenue (referred to as Edgewood Road Gateway) has the potential to be a catalyst for economic development in Bessemer City. The goal of the Plan was to help guide the development of the corridor to support this goal. The document makes recommendations surrounding four initiatives to shape this corridor.

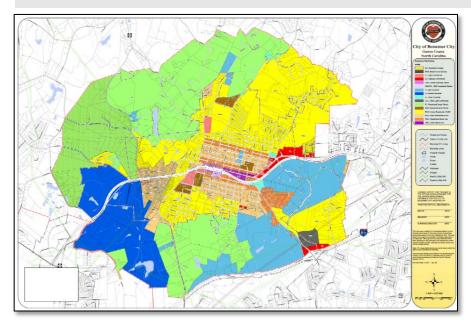

Key Recommendations

- Limit and separate paving, driveways and parking areas; require planting strips to separate pedestrians from streets and parking lots
- Mark business/industrial growth area (Southridge Business Park); make it more pedestrian and bicycle friendly
 - Add a crosswalk once Southridge Parkway is extended, develop guidelines requiring sidewalks and bike lanes
- Improve intersection of Edgewood Road and 12th Street to include sidewalks, crosswalks and wayfinding
- Link and locate community assets with sign at 8th St and Edgewood Road
 - o Establish wayfinding to City destinations
 - Sign should be accessible via sidewalks
 - o Stamped and painted asphalt crosswalks near sign

Unified Development Ordinance and Zoning Map (2018)

Bessemer City's Unified Development Ordinance (UDO) was last updated in 2018. This document outlines the zoning code for the City and its ETJ. Land is classified according to 16 districts with different development rules and intended land uses. The UDO is currently (as of March 2021) being updated.

- Sidewalks and greenstrips (discussed in section 9.18) are mandated in subdivisions and urban standards overlay (USO) districts.
- Sidewalks must be a minimum of 5 feet wide (arterials) or 4 feet (other streets).
- The Central Business District (CBD), Urban Mixed Use (UMU) and Traditional Downtown Overlay (TD) districts specifically mention pedestrian orientation.

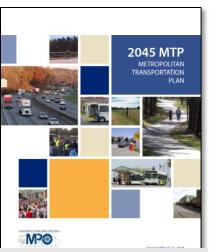

Chapter 2 | Existing Conditions

FINAL ~ February 2022

GCLMPO Metropolitan Transportation Plan (2018)

GCLMPO released their updated MTP in 2018 with recommendations for a more multimodal transportation system. Chapter 12 analyzes active transportation conditions and plans in the region and specifies approved pedestrian projects along 2025, 2035, and 2045 funding horizons.

<u>Goals</u>

- Provide a transportation system that affords the public with mobility choices including walking, bicycling, aviation, freight, and transit options.
- Increase the design sensitivity of pedestrian and bikeway system for both recreation and transportation purposes.
- Increase pedestrian and bicycle safety through public awareness programs.

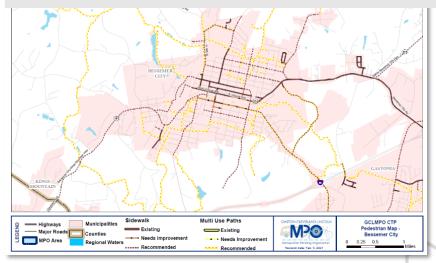

Key Recommendations

- 2025 Horizon: Funded sidewalk on NC 161 from S 14th St to W Boston Ave
- 2045 Horizon: Funded sidewalk on Virginia Ave (south side, 12th St to 8th St)

GCLMPO Comprehensive Transportation Plan (2020)

GCLMPO's CTP is a long-range planning document aimed to assist local governments in making transportation decisions over the next 30 years. The CTP Pedestrian Map recommends safe, efficient, and cost-effective pedestrian improvements, based on current and future travel needs.

- Sidewalks, improved sidewalks, and multi-use paths are recommended in many locations, including:
 - Alabama Ave / Athenia Pl / Edgewood Rd (sidewalk and multi-use path)
 - o Southridge Pkwy (sidewalk and multi-use path)
 - o Maine Ave
 - o NC 161
 - o 8th St / Capps Rd
 - o S 14th St / Crowders Mountain Rd
- Multi-use paths are recommended in many locations

Bessemer City 😽 Pedestrian Plan Update

Carolina Thread Trail Master Plan Gaston County (2009)

The CTT Master Plan for Gaston County coordinates trail development within the municipalities and unincorporated areas of Gaston County to preserve and enhance quality of life. It integrates existing and proposed municipal and county trails with new trail segments to create a comprehensive network that connects people, places, and destinations.

- Secondary priority segment proposed from US 29/74 north to Bessemer City
- Establish a Trail Advisory Committee to promote greenway development and advise the governing group on related issues
- Identify and maximize local trail opportunities through the development plan review process, open space acquisition, and floodplain regulations
- Review current and future utility corridors/easements for local greenway opportunities
- Establish criteria for trail priorities (i.e., cost, length of trail, location, etc.)
- Coordinate with local law enforcement and emergency services on trail design and safety

Chapter 2 | Existing Conditions

FINAL ~ February 2022

ENGAGEMENT SNAPSHOT

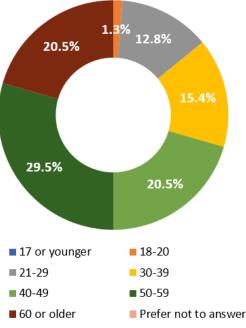

An online survey was distributed widely throughout the City via staff, the Steering Committee, and community partners. More than 125 participants provided nearly 2,000 data points between February 9 and March 14, 2021. This tool gauged participants' attitudes about walking in Bessemer City and asked them to prioritize general strategies for improving pedestrian conditions. A mapping activity allowed participants to identify specific destinations, safety concerns or project ideas in the City.

Participants:

What category includes your age?

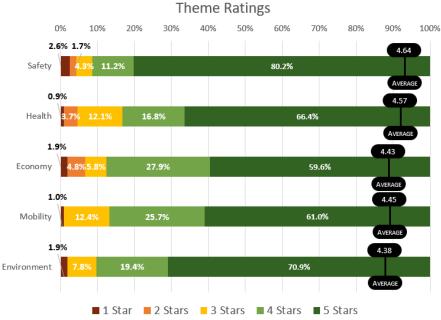

Bessemer City ର୍ଙ୍ଗ Pedestrian Plan Update

Themes

The survey introduced the five priorities expressed in the WalkBikeNC statewide bicycle and pedestrian plan and asked participants to rate the themes on a scale of 1 to 5. The results confirm the importance of each theme with extra weight given to Safety and Health.

Theme Ratings

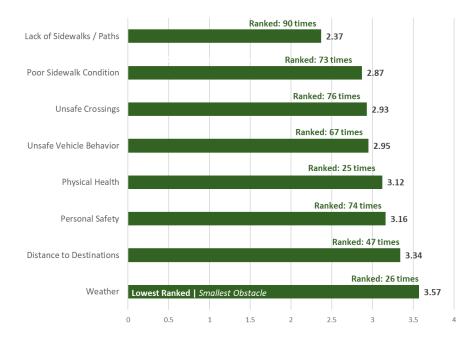

Comments Received

Mobility: "Please make it accessible for handicap with wheelchair ramps to get on the sidewalks and benches every half mile or closer together."

Environment: "We will also need a plan to keep the parks/playgrounds/walking tracks/natural areas in good repair and safe."

Obstacles

Participants ranked the top five biggest obstacles they face when trying to walk in Bessemer City. The results pointed to a need for more sidewalks and paths as well as maintenance of existing facilities. Safety continued to be noted as an area of concern.

Comments Received

Unsafe Crossings: "People drive too fast and aren't considerate of people having to cross the road."

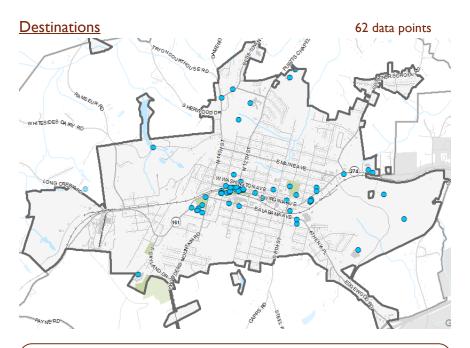

Personal Safety: "Our existing and any new sidewalks need to be very well lit."

Chapter 2 | Existing Conditions

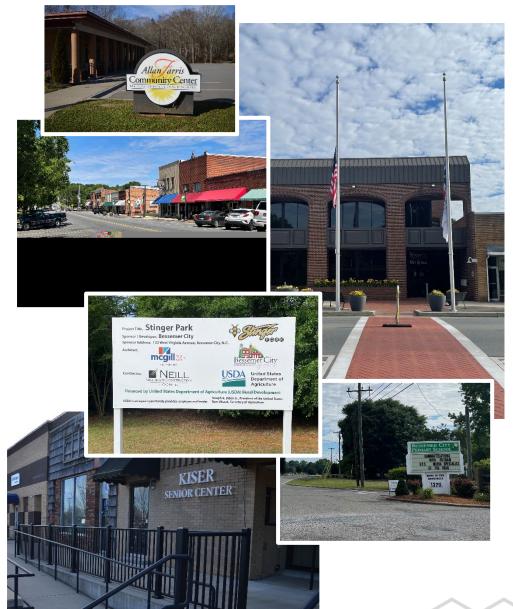

FINAL ~ February 2022

Issues & Ideas

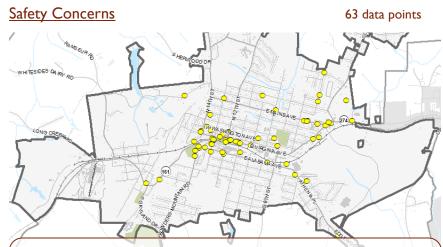

The survey also included a mapping screen that allowed participants to drag markers on a map to identify key locations for walking in Bessemer City. These included **destinations**, **safety concerns**, **project ideas**, **the participant's home**, and **anything else**. 224 data points in total were received on this question.

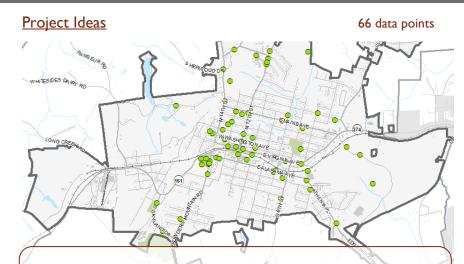

Destinations identified were clustered Downtown, near Bessemer City Pool and Park, and at businesses along NC 274. When asked to specify the type of destination they would like to walk to, participants identified parks and places to recreate as well as restaurants, schools, and shops.

Bessemer City 🕅 Pedestrian Plan Update

Participants identified unsafe crossings/inadequate pedestrian facilities near Bessemer City Pool and Park along South 14th Street as well as unsafe crossings along Virginia Avenue in Downtown. The lack of pedestrian facilities along Main Avenue also were noted.

Many project ideas were suggested near Downtown, near Bessemer City High School, and near Bessemer City Pool and Park. Most of the project ideas were new sidewalks and crosswalks.

Bessemer City 😽 Pedestrian Plan Update

CHAPTER 3

Facility Recommendations

Bessemer City 😽 Pedestrian Plan Update

The Bessemer City Pedestrian Plan Update includes more than 65 project recommendations. These recommendations are based on community feedback, steering committee guidance, input from City and NCDOT staff, and an analysis of existing conditions. The projects proposed will make it safer and easier for residents, employees, and visitors to walk throughout the City. The Bessemer City Pedestrian Plan Update focuses on improvements that connect people to key destinations, including schools, parks, shopping areas, and community facilities.

Recommendations Development

Public feedback was crucial to the development of project recommendations. The results of these activities indicated that increasing pedestrian safety and connecting key destinations were among the top concerns. Safety was the biggest concern among survey participants in both surveys, which may indicate that streets in Bessemer City may be dangerous to walk along or cross. For some people, walking may be their only option to get to their jobs, schools, or homes. Participants identified obstacles to walking, which included the lack of sidewalks/paths, poor sidewalk condition, unsafe crossings, and unsafe vehicle behavior. Comments also emphasized the need for:

- Greater accessibility for the disabled (ADA ramps, etc.)
- Pedestrian access to local walking tracks (health was identified as a top benefit of walking in Bessemer City)
- Easy railroad crossings for pedestrians
- A better sidewalk repair/maintenance program
- Sidewalk access to/from schools

Facility Types

The following recommendations are divided into three facility types: sidewalks, multi-use paths, and pedestrian crossing improvements. Each of the three facility types include a recommendations table and map in the following pages.

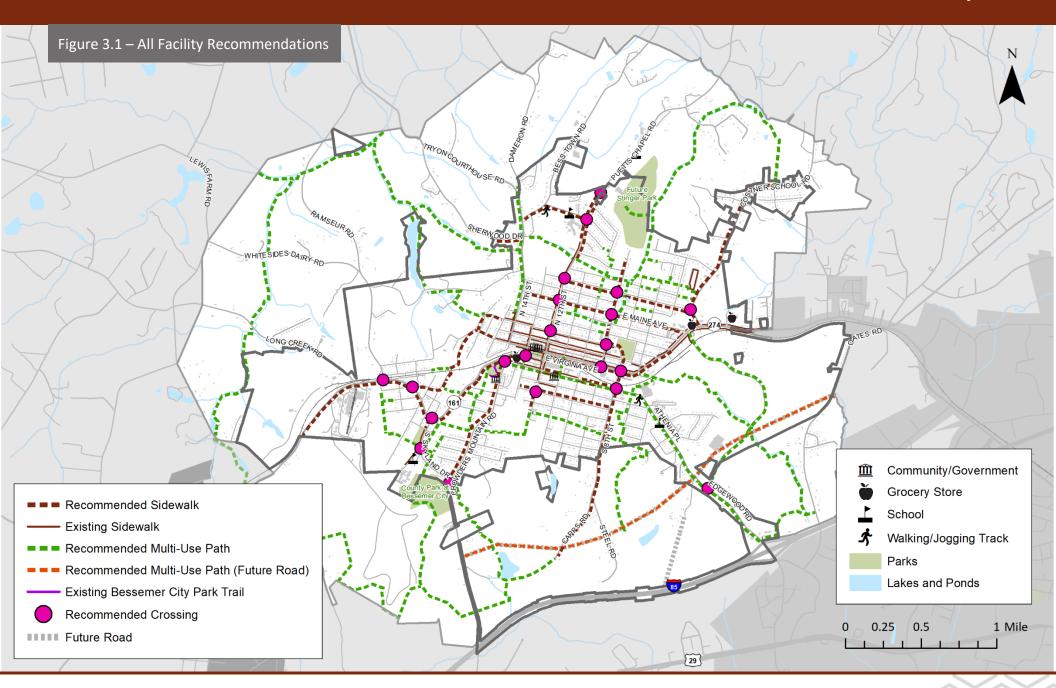

Sidewalk

Multi-Use Path

Pedestrian Crossing

FINAL ~ February 2022

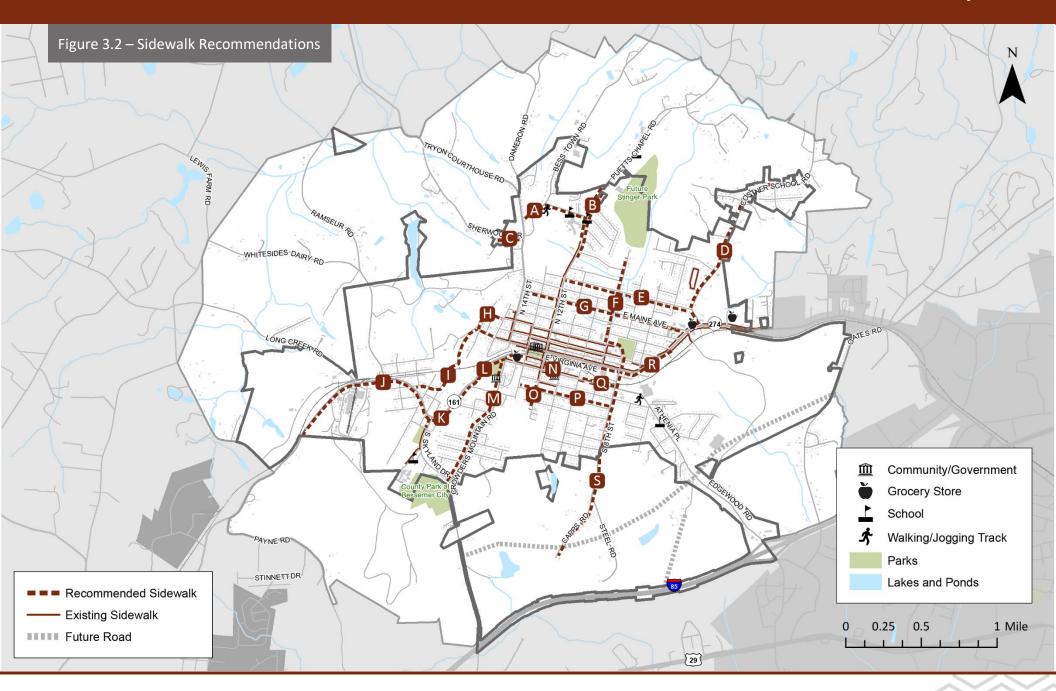

Sidewalk Recommendations

Table 3.1 outlines the proposed sidewalk recommendations. The development of the sidewalk recommendations was largely informed by public input and by the recommendations of the 2010 Pedestrian Plan.

Table 3.1 – Sidewalk Recommendations

ID	Road Name	Extent	Length

FINAL ~ February 2022

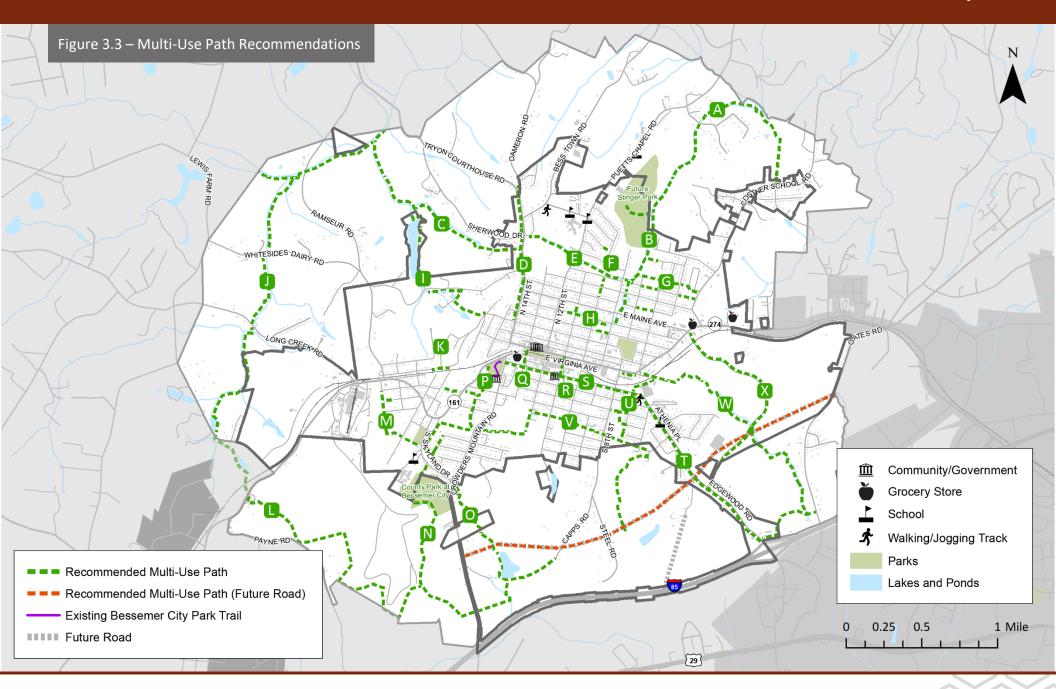

Multi-Use Path Recommendations

A multi-use path is physically separated from vehicle traffic and is designed to be used by pedestrians, runners, bicyclists, and other non-motorized users. The pathways can be located alongside a road or within an independent right-of-way such as along a creek or a former rail line.

Table 3.2 – Multi-Use Path Recommendations			
ID	Facility Name	General Extents	Length

Х	Parkway Trail	NC 274 to Edgewood Rd	1.46 miles

FINAL ~ February 2022

Pedestrian Crossing Recommendations

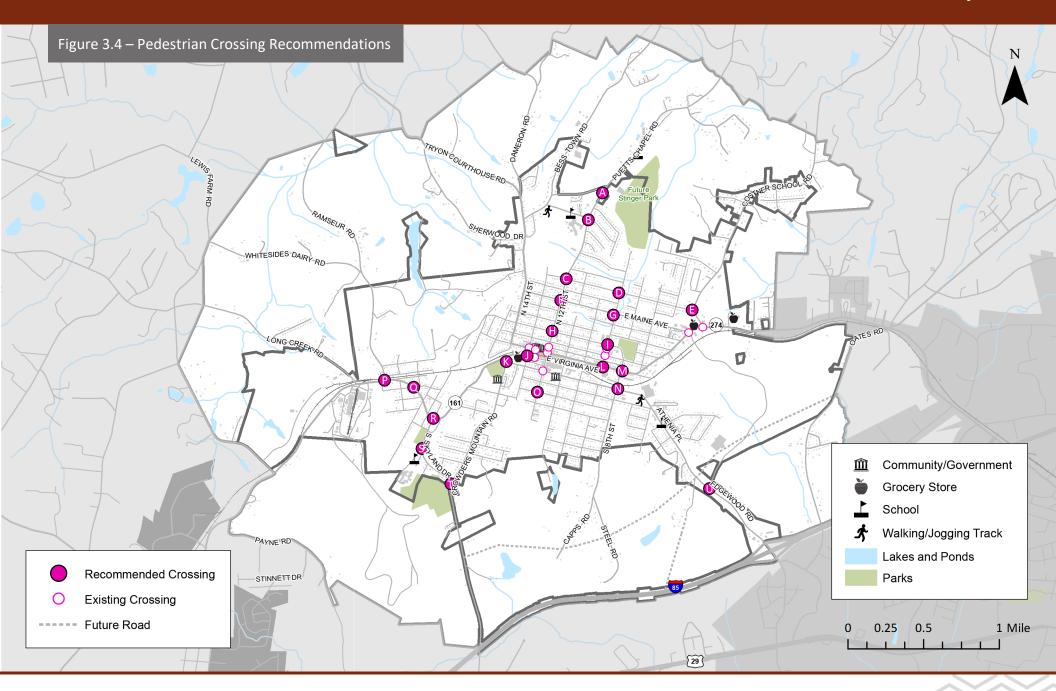

Pedestrian crossings are designed to provide a safe, designated place to cross a street. Most marked pedestrian crossings are located at intersections. This plan identifies locations where crosswalks, curb ramps, and pedestrian signals should be installed to enhance safety.

Many intersections in Bessemer City are difficult to cross but are not specifically recommended in the list at right. For example, these include intersections along NC 274 between Virginia Ave and Costner School Rd, where a skew and inadequate ADA ramps limit mobility. Also, the crossing of W Virginia Ave at 13th St could be improved. Although the recommendations of this plan are not exhaustive, additional crossing projects should be considered when improvement opportunities arise.

Table 3.3 -	- Pedestrian Crossing Recommendations
ID	Intersection

ENGAGEMENT SNAPSHOTI

Online Survey #2 – Project Recommendations

The second online survey focused gathering feedback from the public on draft sidewalk, multi-use path, and pedestrian crossing recommendations. The survey received **37 responses** and was open from May 6 to June 2, 2021. The survey solicited feedback on an initial draft of the project recommendations. The recommendations shown in the report reflect the feedback received, so some recommendations were split, combined, added, or renamed. The IDs here correspond to the maps in Figures 3.2 to 3.4. Participants generally rated the project recommendation categories highly.

Overall Recommendations

On a scale of 1 to 10, how would you rate the overall recommendations?

Average Rating 7.4 / 10

Comments Received

Participants noted that some roads and sidewalks are in poor repair and could use maintenance. Comments received included the suggestion to install historical plaques around town (e.g., the Osage Mill) to add interest. It also was noted that Bessemer City's multi-use paths should be as interconnected as possible and be designed with fun bridges.

Sidewalk Recommendations

On a scale of 1 to 10, how would you rate the sidewalk recommendations?

Average Rating 7.8 / 10

Which sidewalk projects should be done first?

Rank	ID	Project Description	Number of Votes
1	А	Yellow Jacket Ln/Bess Town Rd from N 14^{th} St to N 12^{th} St	19
2*	G	E Maine Ave from N 14 th St to NC 274	11
2*	J + K + L	NC 161 from S 14 th St to city limits (w/ extension on S Skyland Dr)	11
4	I	W Maryland Ave west of N 14 th St; West Virginia Ave west of N 14 th St; N/S Skyland Dr north of NC 161; W Maryland Ave/S Mickley Ave/W Alabama Ave	10
5	В	N 12 th St from M L Kiser Rd to Sunset Ln	9

Comments Received

Most responses supported the recommendations shown. Other suggestions included N 14th St to city limits and 13th St from cemetery to Maryland Ave.

FINAL ~ February 2022

Multi-Use Path Recommendations

On a scale of 1 to 10, how would you rate the multi-use path recommendations?

Average Rating 7.8 / 10

Which multi-use path projects should be done first?

Rank	ID	Project Description	Number of Votes
1	A + B	Path from E Florida Ave & 8 th St to Costner School Rd & 8 th St	18
2*	E	Path from E Florida Ave & 9 th St to N 14 th St & Pine St	10
2*	G	Path from E Florida Ave & 9 th St to Costner School Rd & Ashley Pl	10
2*	S + T	Path along Alabama Ave/Athenia Pl/Edgewood Rd from S 14 th St to I-85	10
5	н	Connection of Lee Ave from N 12 th St to N 9 th St	9

Comments Received

Most responses indicated that the recommendations as shown were sufficient. Other proposed additions included: N 14th St to city limits; Stonesthrow neighborhood; and 13th St from cemetery to Pennsylvania Ave.

Pedestrian Crossing Recommendations

On a scale of 1 to 10, how would you rate the sidewalk recommendations?

Average Rating 7.5 / 10

Which pedestrian crossing projects should be done first?

Rank	ID	Project Description	Number of Votes
1	А	N 12 th St at Bessemer City Central Elementary School	19
2	В	N 12 th St at Yellow Jacket Ln	15
3*		Costner School Rd at E Iowa Ave	9
3*	U	Edgewood Rd at Southridge Pkwy	9
5		N 12 th St at E Maine Ave	7

Comments Received

Most participants agreed that the recommendations were sufficient. One response suggested more marked crossings of Virginia Ave going through Downtown.

ENGAGEMENT SNAPSHOT

Engagement Activity – Down Home Festival

Concurrent with the launch of the second survey, the project team engaged directly with the community through a booth at the 2021 Down Home Festival on **May 8th**. The Bessemer City Down Home Festival is an annual event featuring nightly entertainment, rides, food, and vendors. The event is one of Bessemer City's top draws for residents and visitors, making it a perfect opportunity to converse with community members about their pedestrian needs. **More than 30 participants** interacted with the Bessemer City Pedestrian Plan Update booth and provided feedback.

Activities

Participants learned about the process and the summary of existing conditions in Bessemer City, Then, they were asked to rate the overall recommendations on a scale of 1 to 10, answer some general questions about walking in Bessemer City, or make notes directly on the recommendations map. Most feedback was provided conversationally.

Feedback

Describe walking in Bessemer City today. _____

- Challenging, unsafe, dangerous
- Sidewalks are disconnected, making it difficult to walk for recreation or transportation

Where would you like to be able to walk to? ____

- I'd like my kids to be able to walk to school or to the park without worrying for their safety
- I would like to walk for exercise and easily access a walking track or trail
- New Stinger Park
- Along Edgewood Road to businesses near I-85

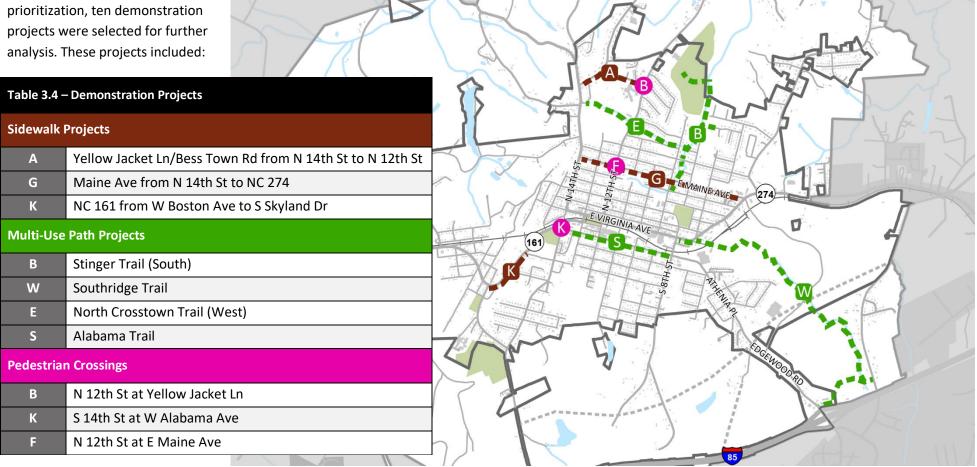

Comments Received

- Favorite recommendations included multi-use paths connecting northern Bessemer City, especially MUPs A, B, C and E.
- Participants expressed interest in staying involved in the process.

FINAL ~ February 2022

Demonstration Projects

Based on the results of the prioritization, ten demonstration

NOTE: The photo simulations and cost estimates shown on the following pages are for demonstration purposes only. Cost estimates were calculated using the NCDOT P6 Bicycle and Pedestrian Project Cost Estimation Tool, which uses factors such as facility type, length, width, surrounding development type, stream crossings, curb presence, and roadways intersected to calculate a planning-level cost estimate. Some projects will require additional stormwater drainage infrastructure which may result in additional cost when engineering-level cost estimates are calculated. All cost estimates are planning-level, non-binding and preliminary.

Sidewalk

А

Yellow Jacket Lane / Bess Town Road South 14th Street to South 8th Street Length | 0.75 mile

Preliminary Cost Estimate | \$1,950,000

BACKGROUND. This sidewalk segment connects the streets just north of Bessemer City High School, providing a critical connection between the high school and the nearby walking track. Sidewalks near schools enable students to walk safely to and from school. Yellow Jacket Road is the primary access to the high school's north parking lot, making it a heavily traveled road during the before- and after-school hours.

PROJECT DESCRIPTION. This project would add a 5-foot sidewalk on the south side of Yellow Jacket Lane and Bess Town Road. The project scored in the top five projects in the project prioritization and was the top-voted sidewalk project in the second public survey.

POTENTIAL CONSTRAINTS

Right-of-way acquisition, existing stormwater ditches/uneven terrain, 35 mph traffic speeds, signage relocation, school parking lot crossings

FINAL ~ February 2022

Existina

PARTICIPAL STREET

Sid	lewal
	C

Maine Avenue North 14th Street to NC 274 Length | 1.05 mile

Preliminary Cost Estimate | \$1,365,000

BACKGROUND. Maine Avenue is an important candidate for an east-west crosstown pedestrian connection. A lack of paved shoulders, fast-moving traffic following NC 274 around Downtown, and a ditch along the north side of the street make it challenging for pedestrians to use safely today. As one of the few streets continuously connecting the east and west sides of Bessemer City, a pedestrian connection here would be valuable to the network.

PROJECT DESCRIPTION. A 5-foot sidewalk along the south side of Maine Avenue is recommended from N 14th Street to connect to the existing sidewalk at E Maine Avenue and NC 274. Maine Avenue was frequently identified as a safety concern in both public surveys, and the project was the top-scoring sidewalk recommendation during prioritization.

POTENTIAL CONSTRAINTS

Moderate traffic volumes, right-of-way acquisition, existing stormwater ditches/uneven terrain, 35 mph traffic speeds, signage relocation

Bessemer City & Pedestrian Plan Update

Sidewalk

K

^k | NC 161

West Boston Avenue to South Skyland Drive

BACKGROUND. NC 161 is a busy highway, used by an average of 4,400 to 5,800 vehicles per day. The highway connects many important City destinations: the south side of Downtown, Bessemer City Pool and Park, and Bessemer City Middle School. BCMS is only about a mile from Downtown, but few students walk to school due to the treacherous nature of this road. Narrow shoulders and blind curves contribute to the danger.

PROJECT DESCRIPTION. A 5-foot sidewalk along the east side of NC 161 is proposed to connect these destinations to the existing sidewalk on S Skyland Drive. The northern portion of sidewalk (from W Boston Ave to S 13th St) has already been funded but will be more useful with this connection to the Middle School and southwestern Bessemer City. Length | 0.66 mile

Preliminary Cost Estimate | \$785,000

POTENTIAL CONSTRAINTS

Moderate traffic volumes, right-of-way acquisition, uneven/sloped terrain, 35 mph traffic speeds, signage relocation

FINAL ~ February 2022

Multi-Use Path Stinger Tra B Stinger Park	il (South) to East Florida Avenue & 8 th Street	Length 1.06 mile Preliminary Cost Estimate \$2,590,000
maximize community access and enjoym pedestrians and bicyclists. Along with th extend this trail another 1.7 miles to Cos recommendation according to survey pa impact for the transportation and parks	I be a tremendous asset to the community of Bessemer City. T ent of the park, it should be easily accessible from town by e Stinger Trail North (Multi-Use Path Recommendation A) that tner School Road and 8 th Street), this was the top multi-use par rticipants. A relatively short multimodal connection could have and recreation system in Bessemer City. Bessemer City & Pedestrian Plan Update

Southridge Trail

Multi-Use Path

East Virginia Avenue & Davis Street to Edgewood Road & I-85

BACKGROUND. This trail would connect the east side of Downtown Bessemer City to Southridge Parkway and Edgewood Road near I-85. The path would provide a pleasant, off-road alternative to Athenia Place/Edgewood Road to access businesses near the interstate. The construction of this path would be an important investment in multimodal transportation and recreation.

PROJECT DESCRIPTION. This project was in the top five projects in the prioritization. The route would follow the creek, providing a secluded environment. In the future, the multi-use path could connect with a multi-use path along Southridge Parkway.

Length | 2.3 mile

Preliminary Cost Estimate | \$6,520,000

Network Opportunities

- Regional connection between Bessemer City and Gastonia
- Access to employment sites along Southridge Parkway
- Use of existing utility easements

Potential Constraints

- Property ownership / easement coordination
- Environmentally sensitive areas along Oates Branch
- Intersection crossings

Signage and Wayfinding. Signage and surface markings along a trail should promote the safe and active use of the facility. Regulatory signs should comply with standards set by the Manual on Uniform Traffic Control Devices (MUTCD). These signs should be supplemented with wayfinding signs that help users find their way and be alerted to local destinations and typical travel times. Mile markers are a simple but useful addition. As the regional trail network expands, interpretive trailhead signs should be incorporated.

FINAL ~ February 2022

3-18

Bessemer City 😽 Pedestrian Plan Update

Multi-Use Path

S

Alabama Trail

South 14th Street to South 8th Street

Length | 0.75 mile

Preliminary Cost Estimate | \$1,950,000

AND A CONTRACTOR OF A CONTRACT

BACKGROUND. Alabama Avenue stretches from Bessemer City Pool and Park to Athenia Place, connecting destinations such as Allan Farris Community Center, the Post Office, many local churches, and the walking track near First Wesleyan Church. Sidewalks are present along this corridor, but some gaps exist, and some areas are narrow and/or worn. A wide multi-use path would open this corridor to pedestrians and bicyclists.

PROJECT DESCRIPTION. A ten-foot multi-use path on the south side of Alabama Avenue is recommended. This project was in the top three projects scored in the prioritization exercise, and in the top three according to the results of the second survey. In combination with multi-use path T, this project would help connect western Bessemer City to I-85.

POTENTIAL CONSTRAINTS

Right-of-way acquisition, partially existing sidewalk, visible utility relocation, 35 mph traffic speeds, signage relocation

FINAL ~ February 2022

Pedestrian Crossing

B

North 12th Street @ Yellow Jacket Lane

BACKGROUND. This intersection is a main pedestrian area located just northeast of Bessemer City High School. Pedestrian safety is of critical importance here due to possible vehicle-pedestrian conflicts during school drop-off, pick-up, and during the school day. A high concentration of student drivers makes pedestrian safety measures even more necessary. A new sidewalk along Yellow Jacket Lane and an extension of the 12th Street sidewalk may further increase pedestrian traffic in this area.

PROJECT DESCRIPTION. This project would include sidewalks on all four sides of the intersection to accommodate for drop-offs at different locations. Additional signage alerting drivers to the possible presence of pedestrians could be considered. Because no stop signs exist on 12th Street at this location, signage encouraging drivers to yield to crossing pedestrians may be important.

POTENTIAL CONSTRAINTS Lack of existing sidewalk, long crossing distances, no traffic control for vehicles on N 12th St, schoolrelated traffic

Pedestrian Crossing

South 14th Street @ West Alabama Avenue

BACKGROUND. The intersection of these streets is a high-traffic area for pedestrians in Bessemer City, but is currently somewhat treacherous. Sidewalks connect W Alabama Ave to Bessemer City Pool, Park and Allan Farris Community Center, but no crosswalk exists to cross S 14th St. The Citgo gas station is likely a destination for users of the pool and park, but crossing the street here is difficult because of high-speed traffic coming from Highway 161. Pedestrian infrastructure mostly exists here, making this an easy fix to improve pedestrian safety near one of the City's most important recreation areas.

PROJECT DESCRIPTION. A crosswalk across S 14th Street is recommended to connect the two existing sidewalk segments. A sidewalk across S 14th Street at NC 161 could also be considered, serving pedestrian destinations along W Pennsylvania Avenue.

crossing distances, limited distance between intersections and park access

FINAL ~ February 2022

Existing

Pedestrian Crossing

North 12th Street @ East Maine Avenue

BACKGROUND. With existing sidewalks on N 12th Street and proposed along Maine Avenue, this is likely to become more of a highly-trafficked intersection by pedestrians. Currently, the intersection is signalized but makes no accommodation for pedestrians. This corridor is especially important for those accessing Bessemer City High School or Stinger Park on foot from the Downtown area.

PROJECT DESCRIPTION. Since this is already a busy signalized intersection, adding crosswalks and pedestrian signals would be a logical next step to make so that pedestrians need not rely solely on the vehicular signal. Sidewalks are proposed at least on the south and west sides of the intersection. Vehicles are more likely to yield if leading pedestrian intervals and pavement markings exist.

POTENTIAL CONSTRAINTS

Coordination with existing signalized intersection, moderate traffic from all directions, visible utilities

CHAPTER 4

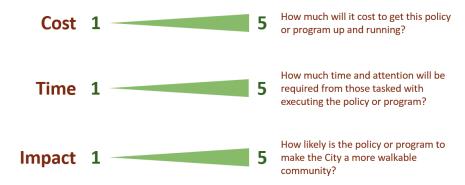

Policy and Program Recommendations

Bessemer City & Pedestrian Plan Update

Policies and Programs

While constructing more sidewalks, multi-use paths, and pedestrian crossings is important, the City also needs a toolkit of programs and policies to encourage safe and active use of the pedestrian network. These policies and programs will help the City get the most use out of investments in infrastructure by encouraging people to walk more, educating the community about the safe use of pedestrian facilities, coordinating with other agencies, and ensuring that facilities remain in good repair. While infrastructure investments are necessary to achieve the vision outlined in the Bessemer City Pedestrian Plan Update, policies provide the systematic framework to ensure those investments succeed.

Each policy or program in rated on a scale of 1 to 5 according to the following categories:

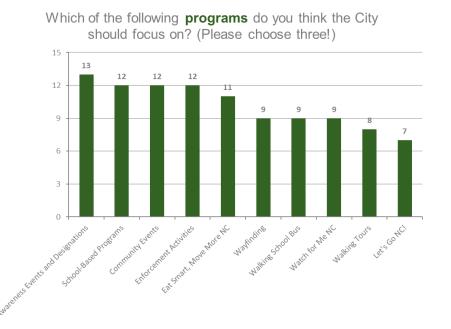

For instance, a policy with a cost score of 1 and an impact score of 5 indicates a low-cost policy with a high impact.

ENGAGEMENT SNAPSHOT

Engagement Activity – Online Survey #2

Policies and programs were presented in draft form, and participants voted on the ones they were most interested to see in Bessemer City.

The most popular program recommendation among participants was awareness events and designations, followed by school-based programs and community events. The least popular were walking tours and Let's Go NC!

Chapter 4 | Policy and Program Recommendations

FINAL ~ February 2022

Pedestrian-Supportive Policies

Encourage the consideration of pedestrian needs in existing planning processes and ensure that the priorities of this plan are reflected in regulatory and enforcement activities.

Policy/Program	Cost	Time	Impact
Include Pedestrian Facilities in Future Roadway Projects: Ensure appropriate pedestrian facilities are included in all future transportation projects.	2	1	5
Establish a Pedestrian Needs Committee: A stakeholder-based committee should help ensure agencies prioritize pedestrian safety and connectivity in projects.	1	2	4
Implement the Land Development Code (LDC): The Bessemer City LDC contains many pedestrian-supportive development policies that should be enforced.	1	2	4
Adopt a Complete Streets and Traffic Calming Policy: A complete street prioritizes the safety of all road users. Traffic calming strategies would promote the safety of all road users by reducing speeds where appropriate.	2	3	5
Enforcement Activities: Establish safety campaigns and enforcement programs to increase driver awareness of pedestrians and compliance with the rules of the road.	3	3	4

COMPLETE STREETS & TRAFFIC CALMING

For decades, transportation decisions locally and beyond have focused on moving vehicles, in effect encouraging nearly every trip—even very short ones—to be taken by vehicle. Traffic congestion and unsafe conditions for pedestrians and bicyclists are just a few of the consequences. Vehicle speed is a significant factor limiting pedestrian safety. By refocusing transportation strategy on moving people instead of vehicles and calming traffic where possible, street design can naturally prioritize safe and accessible bicycle and pedestrian facilities.

KEY CONSIDERATIONS

Complete Streets. Complete Streets are designed to enable safe use and support mobility for all users and transportation modes. By prioritizing safety and accessibility, Complete Streets make it simple and inviting to cross the street, walk to a nearby destination, or commute to work by bicycle, while also accommodating motor vehicle travel. To achieve this, a combination of physical street design features, enforcement of regulations and traffic laws, and effective street operations is required. A local Complete Streets policy in Bessemer City should build upon NCDOT's Complete Streets Policy.

Traffic Calming. Traffic calming is a toolbox of design and management practices that aims to improve the pedestrian and bicyclist experience by decreasing vehicle speed and making travel patterns more predictable. These may include intersection treatments such as landscaping, mini-roundabouts, and pedestrian-activated beacon signals where appropriate. To achieve a safer environment for active modes of transportation in Bessemer City, traffic calming measures should be implemented where needed and designed in tandem with pedestrian safety and comfort and wayfinding techniques to further reduce the impact of vehicle traffic while fostering multimodal travel. Traffic calming solutions must be carefully selected based on the context of the street and consider the different types of uses competing for space within the right-of-way. Because traffic calming measures can also have economic and environmental impact, additional funding sources or grants may be available for these projects.

Strategic Coordination

Making Bessemer City a more walkable place will require extensive coordination with other municipalities and jurisdictions both to align planning efforts and pursue funding opportunities.

Policy/Program	Cost	Time	Impact
Coordinate with Carolina Thread Trail: Establish an ongoing relationship with CTT leadership to help define and establish Bessemer City's portions of the trail.	1	2	4
Coordinate with Neighboring and Surrounding Jurisdictions: Coordinate with surrounding municipalities (Gaston County, Gastonia, Kings Mountain) to coordinate facilities and seek funding through GCLMPO's planning processes.	1	3	4
Identify Funding Opportunities: Apply for regional, state, and federal grants, and explore partnerships with developers and businesses to fund the installation of pedestrian facilities.	1	2	5
Encourage Connections with Interior Sidewalk Networks: Work with developers and property owners to ensure that interior sidewalk networks are accessible to the rest of the City.	1	1	3

CAROLINA THREAD TRAIL

The Carolina Thread Trail (CTT) is a network of trails, greenways, blueways, and conserved corridors that links 15 counties in North and South Carolina, including Gaston County. Led by the Catawba Lands Conservancy, the CTT has quickly become a model for regional collaboration involving local governments, businesses, community groups, and the region's land trusts. In partnership with Bessemer City, the CTT can fulfill its goal of connecting the region and places of interest while conserving significant natural areas.

KEY CONSIDERATIONS

Thread Trail Support. The CTT offers support for local communities in three ways. 1) Community Support. The CTT assists with planning and implementation, including serving on the Pedestrian Plan Update's Steering Committee. 2) Funding. Through private fundraising, the CTT provides grant opportunities for planning, design, land acquisition, and construction. 3)
Expertise. The CTT enhances the regional body of knowledge by hosting an annual trail forum and providing technical support to local communities.

Current Routing in Bessemer City. The CTT has been an advocate for trail planning in Bessemer City since the vision of the CTT was established in 2007. The 2010 Pedestrian Plan shows the CTT entering Bessemer City along Abernathy Creek from the south, entering Downtown, traveling North 14th Street, and exiting the City near Sherwood Drive and the Bessemer City Reservoir. The Pedestrian Plan Update supports the vision with a focus on a combination of greenway trails and sidepath connectors through the City.

Chapter 4 | Policy and Program Recommendations

FINAL ~ February 2022

Maintenance and Assessment

Ensure that pedestrian facilities remain in good repair through predictable funding mechanisms. Use performance metrics such as pedestrian counts to determine demand and utilization.

Policy/Program	Cost	Time	Impact
Repair and Enhance Existing Sidewalks: Many segments of existing sidewalks are in poor condition or are not accessible to disabled residents. Add accessible ramps where needed and respond as promptly as possible to resident concerns.	4	4	5
Assess and Improve Street Lighting: Survey existing street lighting to identify locations where low light impedes pedestrian safety. Include funding for street lighting in future improvements.	4	4	4
Establish a Sidewalk Repair and Maintenance Program: Identify a sustainable funding source for annual repairs and maintenance through City budget or predictable external sources.	2	2	4
Establish a Data-Driven Approach for Annual Evaluation: Starting with the prioritization process outlined in this plan, establish a continuous method of determining priority projects each year.	2	4	5

Encouragement

Seek opportunities to promote walking in Bessemer City and present the City as a pedestrian-friendly community. Continuously inform the public of the goals of the Pedestrian Plan to promote implementation.

Policy/Program	Cost	Time	Impact
Pedestrian Plan Update Promotion: Publicize, promote, and present the Bessemer City Pedestrian Plan Update to the public.	1	1	4
Community Events: Organize road races and <u>Open Streets</u> events to encourage pedestrian activity and community health.	2	4	3
School-Based Programs: Create programs that encourage students to walk to school safely and comfortably. (e.g., Walk a Kid to School event, Walking School Bus, crossing guards)	3	4	4
Safe Routes to School: Establish a Safe Routes to School task force to promote infrastructure and policies supporting walkability and safety near schools.	1	5	4

Education

Educate residents about pedestrian safety and give information on opportunities to walk around town. Ensure that drivers are informed on how to safely encounter pedestrians.

Policy/Program	Cost	Time	Impact
Awareness Events and Designations: Organize events that encourage walking throughout the City through education and awareness. (e.g., <u>Walk to School Day</u> , <u>National Trails Day</u> , <u>Walk Friendly</u> <u>Communities</u> , <u>Active Towns</u>)	3	4	4
Watch for Me NC: Become a partner community to receive educational and marketing material to support pedestrian safety in Bessemer City through a collaborative effort with NCDOT.	1	3	5
Wayfinding: Include signs and pavement markings to show destinations accessible on foot and the distances to each location.	3	3	5
Website: Establish a page on the City's website that can be used by the community as a resource for understanding where current bicycle and pedestrian facilities are and where future facilities may be.	2	2	5

WAYFINDING

A pedestrian wayfinding system and consistent signage design will encourage more foot traffic around Downtown by orienting pedestrians—and bicyclists—to key destinations and simply communicating travel times on foot or by bike. Investing in a pedestrian wayfinding program over time is an important step in creating a more cohesive, welcoming, and accessible active transportation environment in and around Downtown Bessemer City.

KEY CONSIDERATIONS

Signage Placement. A consistent approach to where signage placement is necessary, with the most appropriate location at major intersections and decision points. The program should be selective and strategic to maximize the program's effectiveness.

Signage Design. Signage should reflect Bessemer City with familiar branding. Signage should be easily reproducible, since implementation will occur over numerous years.

National Guidance. National guidance on wayfinding signage can be found in the *Manual on Uniform Traffic Control Devices* (MUTCD) and the American Association of State Highway and Transportation Officials (AASHTO) *Guide for the Development of Bike Facilities.* The signage program should also be compliant with NCDOT standards.

Bessemer City St Pedestrian Plan Update

CHAPTER 5

Implementation Plan

Bessemer City & Pedestrian Plan Update

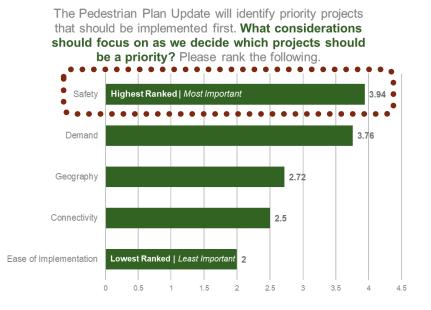

Improving walkability in Bessemer City requires ongoing coordination and sustained commitment among City staff, local elected officials, NCDOT, numerous community organization, and the people that live, work, and visit the City. Bessemer City and its partner agencies can balance investments in infrastructure with policies and programs that maximize the safe and active use of those investments. The Bessemer City Pedestrian Plan Update concludes with an implementation plan that identifies priority projects and a blueprint for the many recommended policies and programs.

Project Prioritization

A discrepancy typically exists between the cost to plan, design, and construct all identified projects with available funding. Thus, it is important to identify projects that best use limited funds. The Pedestrian Plan Update includes a prioritization process based on five evaluation criteria: Safety, Accessibility & Connectivity, Demographics, Cost Effectiveness, and Public Input. Two main factors influenced the weighting: 1) NCDOT Priorities for Strategic Transportation (SPOT) methodology and 2) Feedback from the second survey (as shown to the right). Using similar prioritization criteria to statewide objectives positions the City to more easily obtain funding from NCDOT in the future. Likewise, aligning prioritization criteria with community input helps ensure the results reflect local priorities.

ENGAGEMENT SNAPSHOT

Online Survey #2 – Priority Considerations

FINAL ~ February 2022

Evaluation Criteria

While identifying the need and describing the project scope is important, the reality of budget constraints and the limited standalone funds for pedestrian improvements makes wholescale implementation impossible. These circumstances place additional pressure on identifying priority improvements that align with stated local goals. The recommended projects represent a point-in-time list of suggested improvements. It is expected that the list of projects will change over time.

Bessemer City. Scores were assigned to each sidewalk and multi-use path recommendation and weighted to generate a final priority score

Therefore, the Pedestrian Plan Update represents the first step in creating a local prioritization process that can be repeated in the years to come as additional projects are identified and new information becomes available. The project prioritization process is based on five evaluation criteria to help the City to pursue recommendations with noticeable effect on the walkability in

for each project.

Demographics

Public Input

• Online Survey #2

Safety

NCDOT Planning Level Section Safety Scores 2015-2019: Source data comprised crash data grouped by half-mile roadway segments on State maintained roadways in Bessemer City. Segments were scored on a 0 (safest) to 100 (least safe) based on three components: the crash density of the segment versus the average crash density of similar facilities, an index of severity, and a ratio of "critical" (severe) crashes to total crashes. Project recommendations not along state-maintained roads were assigned a score of 0.

NCDOT Bicycle and Pedestrian Crash Locations 2007-2019: Crash locations and severity of reported bicycle-motor vehicle and pedestrian-motor vehicle collisions on roadways in Bessemer City. The number of crashes on each project recommendation segment was included, as well as the average severity of crashes along the segment (on a 0 to 5 scale).

Scores were added and normalized to generate a safety improvement score for each project recommendation.

Accessibility & Connectivity

Points of Interest in Bessemer City (within ¼ mile of project recommendation): Project recommendations were scored based on the number of the following features accessible within ¼ mile of each project: Schools, Churches, Community Centers, Government Buildings/Services, Grocery Stores, and Walking/Jogging Tracks.

Connections to Existing Pedestrian Facilities: Projects were given a binary (0 or 1) score based on whether they connect to existing facilities.

Variables were added and normalized to generate an accessibility & connectivity score for each project recommendation.

Demographics

Demographic Characteristics: GIS was used to translate data at the Census block group level into an estimated value or average value of each criteria within ¼-mile of the project. Characteristics included Total Population (US Census ACS 2019 5-Year Estimates); Total Employment (US Census LEHD OnTheMap 2018 Employment Estimates); Percent Minority Population (US Census ACS 2019 5-Year Estimates); Percent of Population Below Poverty Line (US Census ACS 2019 5-Year Estimates); and Percent of Households with No Vehicle Access (US Census ACS 2019 5-Year Estimates).

All variables were normalized, added, and re-normalized to generate a demographic score for each project recommendation.

Cost Effectiveness

NCDOT Bicycle and Pedestrian Cost Estimation: Project recommendations were analyzed using the NCDOT tool according to considerations such as facility type, length, width, surrounding development type, curb and gutter presence, stream or rail crossings, percent of ROW needed, and roadways intersected.

All other variables were divided by the cost (to establish "benefit" per dollar) and these values were normalized to generate a cost effectiveness score for each project recommendation.

Public Input

Public Survey #2 Responses: Each project recommendation was scored based on the number of votes received.

The number of survey responses was normalized to generate a public input score for each project recommendation.

FINAL ~ February 2022

Priority Projects

Table 5.1 shows the results of the prioritization process by featuring the top five sidewalk and top five multi-use path projects. While sidewalks and multi-use paths were prioritized using this process, pedestrian crossings were prioritized separately based on input from staff and the Steering Committee.

Top prioritization results included sidewalks along Maine Ave and N 12th Street, as well as multi-use paths along N 14th Street and an improved connection under the railroad tracks along 13th Street.

Table 5	.1 – F	Priority Projects						
				Category Scores (/100)				
Rank	ID	Project Description	Overall Score (/100)	Safety	Accessibility and Connectivity	Demographics	Cost Effectiveness	Public Input
SIDEWA	ALK PI	ROJECTS						
1	G	Sidewalk along E Maine Ave from N 14 th St to NC 274	75	96	73	87	20	58
2	В	Sidewalk along N 12 th St from M L Kiser Rd to Sunset Ln	65	100	60	59	21	47
3	L	Sidewalk along NC 161 from S 13 th St to W Boston Ave	60	47	100	61	23	58
4	Α	Sidewalk along Yellow Jacket Ln/Bess Town Rd from N 14th St to N 12th St	59	60	33	54	35	100
5	R	Sidewalk along NC 274 from N 9 th St to E Ohio Ave	56	40	60	89	100	21
MULTI-	USE P	ATH PROJECTS				1		
1	D	14 th Street Trail (W Maryland Ave to Windward Dr)	63	100	88	39	40	17
2	Q	13 th Street Connector (W Alabama Ave to W Virginia Ave)	48	41	100	29	100	0
3	S	Alabama Trail (S 14 th St to S 8 th St)	47	47	94	39	37	11
4*	w	Virginia to Southridge Trail (E Virginia Ave/Davis St to Edgewood Rd/I-85)	36	0	41	100	9	33
4*	т	Athenia and Edgewood Trail (S 8 th St to I-85)	36	53	18	63	16	11

Prioritization by Cost Tier

Because numerous projects that scored highest on the overall prioritization were high-cost projects, staff recommended an additional layer of prioritization whereby these results were broken down into cost tiers. This clarifies which projects would have the most powerful impact at various budget levels.

Table 5.2 – Highest Ranked Sidewalk Projects by Cost Tier					
ID	Project Description	Score (/100)	Length	Estimated Cost	
SID	EWALK COST TIER A (More than \$1.5 million)				
J	NC 161 (S Skyland Dr to city limits; extension on S Skyland Dr)	51	1.17 mi	\$1,640,000	
SID	EWALK COST TIER B (\$1 million to \$1.5 million)			
G	E Maine Ave (N 14 th St to NC 274)	75	1.05 mi	\$1,365,000	
В	N 12 th St (M L Kiser Rd to Sunset Ln)	65	0.84 mi	\$1,140,000	
М	S 14 th St/Crowders Mtn Rd (NC 161 to S Skyland Dr	51	0.93 mi	\$1,085,000	
SID	EWALK COST TIER C (Less than \$1 million)				
L	NC 161 (S 13th St to W Boston Ave)	60	0.43 mi	\$950,000	
A	Yellow Jacket Ln/Bess Town Rd (N 14 th St to N 12 th St)	59	0.44 mi	\$595,000	
R	NC 274 (N 9 th St to E Ohio Ave)	56	0.55 mi	\$715,000	
N	E Alabama Ave (S 11th St to S 12 th St)	54	0.11 mi	\$165,000	
Q	E Alabama Ave (S 8 th St to S 10 th St)	52	0.23 mi	\$315,000	

Because multi-use paths are typically more expensive than sidewalks, each facility type was assigned into three independent tiers.

Tier	Sidewalk	Multi-Use Path
Α	More than \$1.5 million	More than \$4 million
В	\$1 million to \$1.5 million	\$2 million to \$4 million
С	Less than \$1 million	Less than \$2 million

Tabl	Table 5.3 – Highest Ranked Multi-Use Path Projects by Cost Tier					
ID	Project Description	Score (/100)	Length	Estimated Cost		
MUI	TI-USE PATHS COST TIER A (Over \$4	I million)				
w	Virginia to Southridge Trail	36	2.30 mi	\$6,520,000		
Α	Stinger Trail (North)	34	1.69 mi	\$4,235,000		
MUI	LTI-USE PATHS COST TIER B (\$2 - \$4	million)				
D	14 th Street Trail	63	0.90 mi	\$2,470,000		
т	Athenia and Edgewood Trail	36	1.44 mi	\$3,670,000		
В	Stinger Trail (South)	34	1.06 mi	\$2,590,000		
G	North Crosstown Trail (East)	32	0.81 mi	\$2,000,000		
х	Southridge Parkway Trail	31	1.46 mi	\$3,435,000		
MULTI-USE PATHS COST TIER C (Less than \$2 million)						
Q	13 th Street Connector	48	0.14 mi	\$635,000		
S	Alabama Trail	47	0.75 mi	\$1,950,000		

FINAL ~ February 2022

The recommendations of the Pedestrian Plan Update must serve Bessemer City's most vulnerable populations. Metrics of vulnerability such as lack of vehicle access, poverty, and minority status are shown below in combination with the facility recommendations. This plan seeks to ensure that more vulnerable areas of Bessemer City are adequately served by its recommendations. Metrics of vulnerability were also included in the prioritization process.

Figure 5.1 – Recommendations Serving Households Without Vehicle Access

Many recommendations of this plan are intended to serve those areas in Bessemer City with the greatest concentration of households without vehicle access. These include four proposed multi-use paths in the east side of the City and a sidewalk along Costner School Road to the northeast. However, these block groups overlap with some of the least populated areas of the City.

Bessemer City 😽 Pedestrian Plan Update

JISFARM RD

Figure 5.2 – Recommendations Serving Populations Below Poverty Line

Other recommendations serve parts of Bessemer City with significant populations in poverty. These include many sidewalks, multi-use paths, and pedestrian crossings in the area of southwest Bessemer City (near NC 161 and Bessemer City Middle School) and in southeast Bessemer City including four multi-use paths.

FINAL ~ February 2022

Funding Sources

below.

FINAL ~ February 2022

Local Funds__

Bessemer City does not currently allocate local funds for sidewalk construction or maintenance. The City should explore ways to designate some funds to fund improvements outright or as a matching contribution for other funding sources. One option for consideration would be to re-evaluate water/sewer tap fees.

Powell Bill Funds

North Carolina's state street-aid program, also known as the Powell Bill program, provides funding for eligible municipalities based on mileage and population of locally-maintained roadways. The primary function of the Powell Bill program is to assist municipalities in funding resurfacing local streets; however, those funds may also be used for the planning, construction, or maintenance of sidewalks, multi-use paths, and bikeways. Powell Bill funds may be pursued as a match for future updates of this plan or a Bicycle and Pedestrian Plan. For Fiscal Year 2021-2022, Bessemer City received \$155,000 in Powell Bill funding.

RAISE Grants

The Rebuilding American Infrastructure with Sustainability and Equity (RAISE) grant, formerly known and Better Utilizing Investment to Leverage Development (BUILD) and Transportation Investment Generating Economic Recovery (TIGER), will award over \$1 billion in grant projects in fiscal year (FY) 2021. Eligible projects for RAISE grant include both capital and planning projects. The capital projects could include roads or bridges, public transportation, passenger and freight rail, or intermodal projects. Planning projects include the planning, preparation, or design of eligible surface transportation projects. If projects are located in rural areas, up to 100 percent of the costs of the project may be funded by the RAISE grant. The City should identify eligible projects and consider submitting a formal application.

Non-Profit Organizations_

Non-profit organizations including health care organizations or community funds are potential sources of funding for multimodal facilities. These funds have been used in some communities to complete small-scale projects, such as wayfinding, bike-rack installation, or improvements to existing facilities. The Carolina Thread Trail offers a <u>grant program</u> for regional trail implementation. Because Bessemer City contains portions of the planned trail alignment, the City may apply.

Private Development__

The City's new land development code requires private developers to include sidewalks at least 5' wide along all streets in their site plans. This allows the City to build pedestrian facilities without paying for it directly. In future updates, the code could consider requiring both on-and off-street facilities in addition to pedestrian benches.

Transportation Bonds

Transportation bonds generate revenue from a tax increase on property values. In the state of North Carolina, bond referendums must be approved by the local council and later included on a ballot to be voted on by residents. The funds generated from the transportation bonds can be used toward roadway, bicycle, or sidewalk projects.

Parks and Recreation Trust Fund_

Since 1994 the North Carolina Parks and Recreation Trust Fund (PARTF) awards matching grants to local governments for parks, public beach access, and improvements in state parks. A local government can request a maximum of \$500,000 with each application and can be used to build or improve facilities for public use, or to acquire land for parks. PARTF funds may be used to improve the accessibility of existing facilities, including to bring them into compliance with current ADA standards. The grants require a 50% match from the applicant.

OF BESSEMER

FINAL ~ February 2022

Conclusion

The recommendations communicated as part of the Bessemer City Pedestrian Plan Update provide a blueprint for how the City can achieve its vision for walkability.

Bessemer City will celebrate its family-oriented, small-town character by becoming a safer and more accessible place to walk for recreation and transportation.

The process has reinforced the community's desire to create a transportation network that promotes different ways to move around the City and supports long-held expectations for a quality of life that is uniquely Bessemer City. But the Pedestrian Plan Update is only one part of a broader vision for mobility that supports local goals related to land use, design, economic development, natural resources, and community services. The plan seeks to ensure that transportation decision-making will consider existing and future issues and needs. The plan provides transportation strategies that consider the existing and future needs of Bessemer City residents, visitors, and employers alike. It also sets expectations for a flexible implementation framework that aligns potential projects with reasonable expectations for funding. With this document, community leaders and the people that call Bessemer City home can set the stage for the City's future and how it will accommodate the needs of pedestrians and keep people, regardless of their age or physical ability, moving forward.

Bessemer City & Pedestrian Plan Update
