

10_15 CONCRETE DRIVEWAYS NOT COUNTED BY DnC MANAGER

Question:

Having problems using DnC Manager to draw concrete driveways (Radius and Drop Type). Screen locks up.

Answer:

- 1.) This doesn't address the reason, but is a work around:

"Choose another pay item first and then was able go back and place initial payitem (concrete driveway radius or drop type) afterwards."

- 2.) The reason for these two pay items to crash was because the line style was not set to "bylevel" in the ddb. I've changed the style to bylevel (attached ddb) for both driveway types and it doesn't crash when placing these two pay items.

The driveway types in the Roadway rd payitems.ddb are actually custom linestyles and not cells. There are driveway cells, but they are used for hearing maps (red and filled-in in the rd_HearingMap.ddb).

This was not an issue before SS2. The problem was first reported over a year ago (TDE custom linestyle in the rd_DraftTools.ddb). CADD Services is aware of the issue and can report to Bentley. Meantime, we can replace the CLS with "bylevel" as a workaround.
