

12_01 4 in. Concrete Island Cover Payitem

Question:

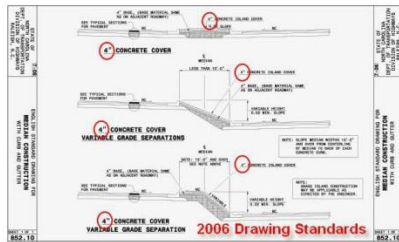

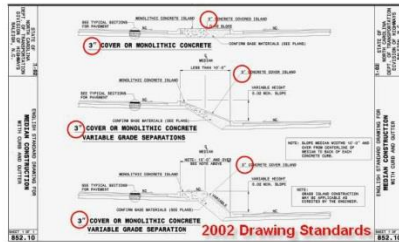

I have a median concrete island (8' wide) with a 2'-6" curb and gutter. Standard calls for a 4" concrete cover. You have 3" and 12" concrete covers in D&C Manager but no 4". Should I use the 3" island cover instead?

Answer:

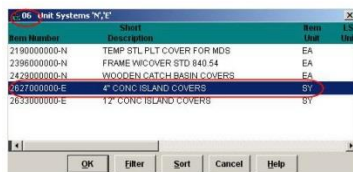

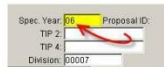

The 3" Concrete Island Cover payitem should not be used in lieu of the 4" Concrete Island Cover payitem. The Roadway Payitem D&C Manager has been modified to include the 4" Concrete Island Cover payitem.

Note that in the April 3rd, 2006 memo entitled New and Revised Standard Drawings, Drawing Standard 852.10 (sheet 1 of 1) has been revised to increase the median concrete cover depth from 3" to 4".

In addition, Transport has also been revised to reflect this change.

While there may exist plans which still use the older 2002 Standards, Roadway CAD Support will leave payitem 262600000 3" Concrete Island Cover for the time being as it is in our Payitem D&C Manager for an indeterminate time period. When appropriate authorization has been given, it will then be removed from the D&C Manager.
