

13_08 Large Alignment Scales

Question:

I have a need for large scales in D&C Manager. Currently the scales only go up to 100 for the proposed alignment. I have a need for 200 scale for my project. Can you provide me with the other scale options?

Answer:

Use our hearing map ddb for this situation. For english projects, the standard annotation scales are 1"=200' and 1"=500'. For metric projects it is going to be 2000 and 4000.
