14_05 Concrete Islands on top of Bridge Slabs

Question:
How can Criteria be used to draw concrete islands on top of bridge slabs?

Answer:
The Cri_FinishedConcIsland.x file has been modified to draw concrete islands on top of bridge slabs. Once you have finished the proposed template, roads and structures (with brdg01.cri), create another Criteria input file or copy the sample Finished Concrete Island input file.

Processing this new input file, the concrete island horizontal location is gathered from the design file. Then the concrete island is placed on top of the finished surface, roadway pavement or concrete bridge slab.
