

## 15\_16 RD\_DSN Tool Rearranged

### Update:

The Roadway tool frame RD\_DSN has been re-arranged to be more efficient and organized.

1. The AutoTurn toolbox has been moved up with the REMAP toolbox.
2. Typicals tool family has been removed due to the obsolete cell references and replaced with a line of DDB tools.
3. Added new line of tool family called RD\_VBA (2nd row, 2 column). The first tool is an introduction of the new procedure to create a Centerline Coordinate List. In addition, the Designer can create a Centerline Coordinate List Sheet with the new Roadway feature call "The Roadway Easy Print Button". The help file has been linked to the Web via the blue HELP button.

4. The rest of the buttons were rearranged in the order they are used to avoid potential conflicts with clicking the wrong button.
