

16_07 Copy from Model to Model

Question:

Is there a way to copy from one model to another in the same file?

Answer:

Yes. To copy models in the same file, do this. note you can also import models.

If you just want to copy part of a model, then reference the file interactively and choose the particular model. Once referenced, treat the model like any file and copy any element from the referenced model to the active file.
