

## **16\_31 Problems Creating Slope Stakes**

### **Question:**

I haven't been successful creating slope stakes with V8 and Geopak. I have tried using Reports and using text slopestake input files also.

### **Answer:**

Slope Stake input files no longer work for laying out ss on plans. Use the limit of construction tool. All that is required is the proposed finished grade parameters. There are two levels, the pink subgrade line "Prop XS Subgrade Earthwork" and the green finish grade/grass surface "Prop XS Finish Grade Earthwork". for the existing ground line parameters.
