16_36 Reseting Microstation Preferences with Win7

Question:
Tried to find the Win 7 upf batch files but only found the regular upf's and these don't retain the personal settings after backing up. Others have tried and failed, is this a common problem at this time??

Answer:

- Start Microstation.
- Setup your Toolboxes and Workspace Preferences.
- Exit Microstation, immediately.
- Run S:\Share\rd_InternalApplication\Upf\Make_Backup_UPF.bat
