17_24 UltraEdit Printing Wrong Fonts and Columns Misaligned

Question:
When opening any of the earthwork output files with UltraEdit the files look fine on screen. However, when previewing or printing the text is a different font and the columns don't line up. What is causing this?

Answer:
UltraEdit has the ability to set the display font (on-screen) and a different font for printing under the View main menu item. However (also under the View main menu item) if you set "Mirror Display Font" on, then both the display font and printer font are identical. Printing should be WYSIWYG.
