

## **17\_26 Wetland Limits Boundary**

### **Question:**

Why does the Existing "High Quality (HQ)", "Medium Quality (MQ)", and "Low Quality (LQ)" Wetland Limit Boundaries plot out the same as the general "Existing Wetland Boundary", even though all three line style symbologies are in the CADD files and the "Existing High Quality Wetland Boundary" symbology is different from the "Existing Wetland Boundary" on the Symbology Sheet?

### **Answer:**

Roadway Designers can view the different water qualities of wetland for design purposes. Water qualities of wetland are not shown on set of Roadway plans. Modification to Symbology Sheet and changing the design script to plot water quality may be necessary pending further investigations.
