

2_8 NO GUARDRAIL WARRANT TEMPLATES

Question:

I have a Sub-Regional Tier bridge project which does not required guardrail warrant for most fill slope/height. Can a template be built to make this type of projects more easier to work with?

Answer:

Two new shoulder section templates have been created without guardrail warrants. The only other way to introduce guardrail into the Civil Model is with guardrail (orange G/R) graphics or shoulder berm gutter (blue G/R) graphics.
