

3_7 RAISED MEDIAN COVER OPTION

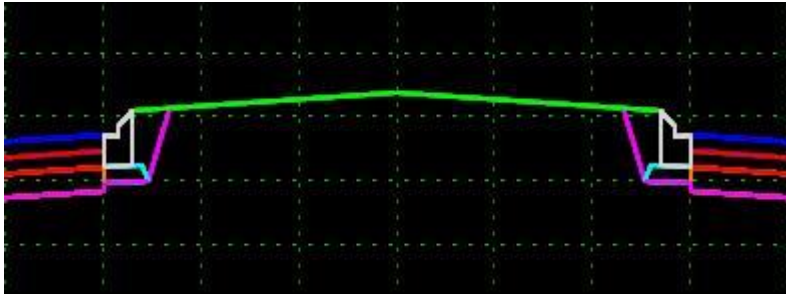

Question:

How is a raised median with a concrete cover shown in the template?

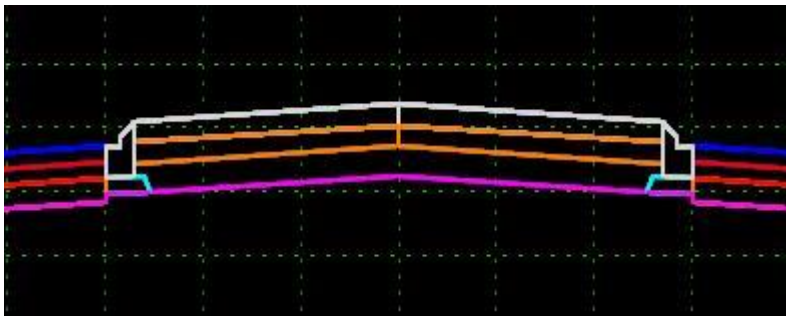

Answer:

Use the parametric constraint label **"MD_Conc Cover Switch"** to switch from a grass island to a concrete island.

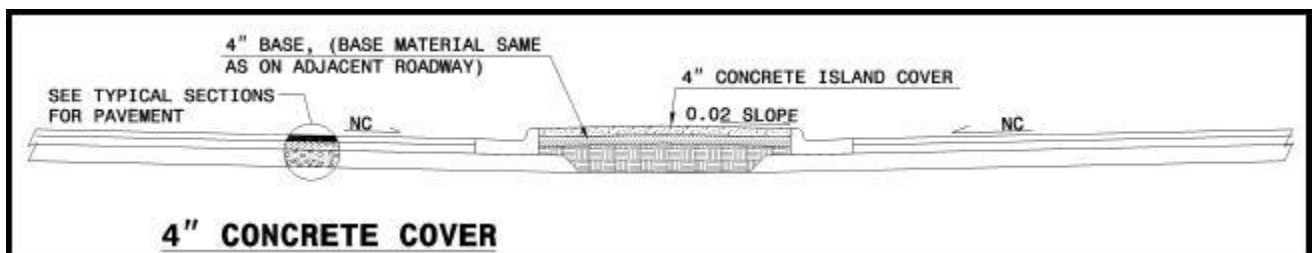

The default switch position is at the 0 mark (grass island).

When a value of 1 is entered as the switch parametric constraint label, a raised concrete island is shown.

The median concrete cover option comply with Roadway Standard Drawings 852.10, Median Construction with Curb and Gutter (sheet 1 of 1).

This option is built into all three raised median templates, including the 3rd configuration which satisfied the below typical section (C&G with driveways and sidewalks).

- Templates
- Backbone Only
 - Bridge
 - Culvert
 - Right Side Only
 - Road
 - ✗ C&G Section TMP-1
 - ✗ Onsite Detour Widening Left Off Existing TMP-
 - ✗ Onsite Detour Widening Right Off Existing TMP-
