

7_04 INCORPORATING HYDRAULICS DITCH DESIGNS

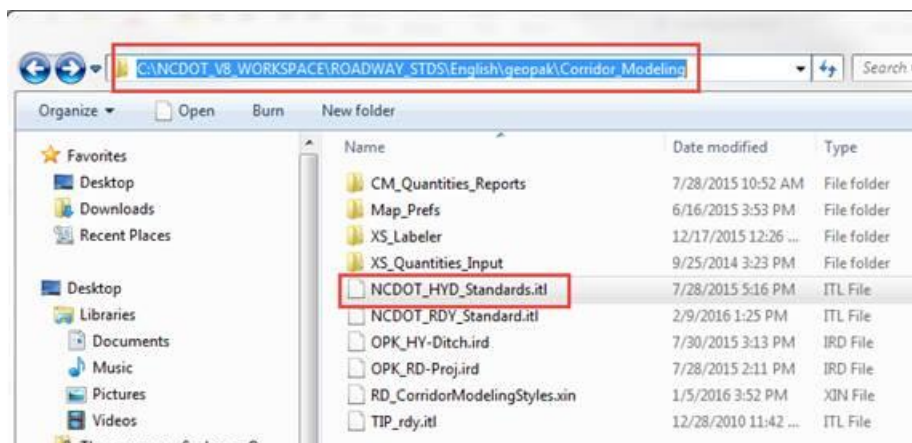

Question:

Where can I find the Special Lateral Ditch – RSO component? What is the current best practice method on how to apply ditches into my model?

Answer:

NCDOT created delta training *Introduction to Hydro Drainage Ditch Models: Incorporating Hydraulics Ditch Designs* in October 2014. This introduced a better workflow for incorporating ditches into models.

Most drainage ditch components and templates using the new method are located in their own template library in our workspace, ***NCDOT_HYD_Standard.itl*** (no longer in the NCDOT_RDY_Standard.itl).

The older training exercise on our webpage (Corridor Modeling, Intermediate, Chapter 8 - Lateral and Roadway Ditches) is obsolete and should be ignored. It has not been removed completely in order to serve projects that had previously used that method for representing ditches in their models.
