10_4 Timeframe for Criteria and NCWedge be supported

Question:

How long will Criteria and NCWedge be supported?

Answer:

As discussed in the last CADD Users Group Meeting, because Criteria does not include the new standards in Roadway Design side slopes and shoulder rollovers, we will no longer support calls for Criteria. Any cross sections produced with traditional Criteria can be replicated (or built into) with Corridor Modeling. Also wedging quantities and setting resurfacing grades can easily be accomplished with Roadway Designer Overlay/Cross Slope Optimization Tools, eliminating the need for creating complex Geopak shapes and NCWedge runs.

Consideration for existing Right of Way, Final, and future Construction Revision plans are in the works for the next phase of full implementation, archiving the Criteria Library. In moving forward, Jim McMellon will send out further details to the Project Engineers and Squad Leaders on our implementation plans (and meeting minutes) next week.
