

## 01\_11 GPK PROFILE NOT UPDATED IN ROADWAY DESIGNER

### Question:

I recently updated my profile and saved it to the GPK file. Scrolling through the cross sections in Roadway Designer, the updated grade is not reflected. Why not?

**Answer:** Most likely, the updated profile simply needs to be reimported in the Corridor Modeling Preferences under the Geometry tab and resaved to the RDP file.

If that does not correct the problem, then delete the rd\_wizard.rsc file and reimport. In extreme cases you may have to delete the whole ALG file under the "rddb" subfolder and start the whole process to convert the GPK to ALG format. With the updated profile saved to the RDP file you can reopen Roadway Designer and see your grade updated as you scroll through the cross section view.
