Contract No.:
T.I.P. No.:
F. A. No.:
County:
Description:

T. H. Engineer
NCDEQ Regional Office Supervisor
111 Environment Drive
Anytown, NC 28888-1111

Subject: Coal Fly Ash Embankment

Approximately 67,000 cubic yards of coal combustible products were placed in the roadway for embankment on the above referenced project from -L- stations:

20+60 to 23+50 for a distance of 290 feet +/-
41+20 to 49+65 for a distance of 845 feet +/-
64+25 to 68+80 for a distance of 455 feet +/-

The fly ash embankment has been encapsulated with a minimum of 4 feet encapsulation. Licensed NC Professional Engineers were involved in the on-site observation of the coal fly ash embankment construction.

As required by NCGS§130A-309.223, a "Statement of Use of Coal Combustion Products" was recorded at the Hometown County Register of Deeds on November 24, 2015 in Book 6239, Page 2683-2684. A copy of the statement is also included for your files. Based upon my review of available records and documentation, this is to certify that the requirements of NCGS§ 130A-309.222 were followed in the placement of this material.

The as-constructed plans for this project will indicate the exact location of the coal fly ash embankment. A set of these plans will be located at the NCDOT's Division 17 office at 111 Division Drive, Anytown, NC. Please contact me at (919)555-5555 if you need additional information.

Sincerely,

I. M. Engineer
Resident Engineer

cc: Chief Engineer
Division Engineer
State Construction Engineer
Bridge/Roadway Construction Engineer

(SEAL – N. C. Professional Engineer)
