ACTION	YES	NO	N/A	COMMENTS
Coverage should be visually checked at the beginning of the operation so that adjustments can be made if necessary (2 tons/ac, 75% complete coverage, no ground visible 10' ahead).				
Is the area in a high quality water zone? Asphalt cannot be used as a binding agent in high quality water zones unless approved by the Roadside Environmental Field Operations Engineer.				
Is the proper binding agent on site with the proper application equipment?				
Check the rate of binding agent application to ensure that it will serve its intended purpose.				
Check the project special provision to determine if crimping is required.
