

Application Modifications and Enhancements

HICAMS Version 2 was implemented on January 5, 1997. This version included the new Claims Tracking module and enhancements to Version 1 functionality.

- Claims Tracking: lets users enter and maintain contractor Claims and Intents, query Claims, Claims and Intents Notifications, enter and maintain Specification Rules for Claims, Intents, and Claims Authorizations
- HiCAMS Menu Changes: contained name changes for Sample Details, Authorize and Receive Samples, reference changes from "project" to "contract," new Claims Tracking menu item, Query Tool menu changes, "Task" menu item changed to "References," Admin menu changes
- MPI Mainframe: set-up functionality was replaced with a new automated mainframe upload capability
- Tracks unsuccessful log-on attempts
- Deletes Notifications over 60 days old
- Sample Details: system checks for the validity of related and correlated samples
- Database Integrity: application changed to automatically close only when a reconnect due to a deadlock was unsuccessful
