

Application Modifications and Enhancements

HiCAMS Version 3 was deployed on May 11, 1998. This version included three new modules: Contract Setup, Contract Maintenance, and Work Order Maintenance as well as changes and enhancements to Claims Tracking, Sample Tracking, Query Tools and Notifications.

- Enter Letting Information (Contract Setup): provides the Central Construction Unit the ability to download contract data from the Design Services System to HiCAMS.
- Review Contract Data (Contract Setup): verifies that downloaded contract information is accurate, and build contracts based on verified data.
- Authorize Contracts (Contract Setup): adds details to the contract data in HiCAMS and authorize contract information for use by other HiCAMS clients.
- Activate Contracts (Contract Setup): activates contract data in HiCAMS for entry and maintenance in other parts of the system when contract work begins.
- Review Contract Details (Contract Maintenance): authorized clients can view and update contract data.
- View Line Items (Contract Maintenance): displays and prints details about the contract line items for a specific contract.
- View Work Order Details (Contract Maintenance): displays the details of a work order associated with a specific contract.
- Review Contract BOM (Contract Maintenance): displays materials for each line item of a specific contract.
- Review Contract Times (Contract Maintenance): tracks the agreements between NCDOT and the contractors regarding specific deadlines associated with a contract. It also allows the clients to view and update the liquidated damages rate and the unit of measure associated with the rate.
- New Work Order (Work Order Maintenance): adds a new work order to a contract.
- Merge Work Order (Work Order Maintenance): merges two existing work orders together.
- Review Redistribution Percentages (Work Order Maintenance): indicates the actual percentage of the total work on a contract that is to be done under each work order.
- Split Work Order (Work Order Maintenance): splits a contract line item across work orders.
- Query Contract Information: enhancement to the query tool that lets clients generate, view and print a listing of specific information about a contract.
- Query Contract Bill of Materials: enhancement to the query tool that lets clients define criteria to generate, view and print materials information for a specific contract.
- Query Bill of Materials: enhancement to the query tool that lets clients generate, view and print materials data matching specified criteria that are not contract specific.
- DOH Vendor System for Contractor Directory and Civil Rights
