

# Application Modifications and Enhancements

*HiCAMS Version 6.0.1 was released 7/7/2005. There was no Vendor Release done at this time.*

## *HiCAMS Version 6.0.1*

### **CONTRACT MAINTENANCE - Review Work Items**

- Corrected application crash that occurred when the home/end key is typed while the MPI selection window is displayed from Review Work Items.

### **CONTRACT TRACKING - Review Material Prepayments**

- Modified the window and query tool to filter out Work Items from the Material Selection window.

### **FIELD INSPECTION REPORTS - Structural Steel**

- Prioritized Security Tags so that "FIR Super user" takes precedence over "FIR Complete by Inspector" tag.
- Expanded the Dimension field on Hardware Tab to accommodate 30 characters so a select error does not occur when you click on the report tab.

### **STANDARD REPORTS - Contract Progress Report**

- Corrected the functioning of the Progress Filter's "Either" criteria.

### **TOOLS - Notifications**

- Corrected functioning of the Go To button.
  - In Staff Relink, there is no destination to go to, and the button was disabled.
  - For Independent Assurance Correlations and Claim Intents, the Go To button is now linked to the correct window.

### **CLAIMS**

- Removed the error message that appeared incorrectly during Claim Approval delegation. The message stated "The selected staff does not have update access to claim Approval" and had been appearing even when the selected staff had the correct security.
