

Application Modifications and Enhancements

HiCAMS & DOH Vendor Version 6.4.1 were released Friday, 1/11/2008.

HiCAMS Version 6.4.1

HiCAMS - General

- M&T has been updating the Master Bill of Materials to designate which items are "Labor Only". This improves the integrity of the new "Labor Only" edit in Estimates and reduces the instances where the warning is produced falsely.

CONTRACT MAINTENANCE – CONTRACT DETAILS

- Restored the ability to review all Pre-HiCAMS contracts.

CONTRACT TRACKING – AUDIT MATERIALS and PROJECT CERTIFICATION

- Corrected a problem where extremely large Notes entries caused the application to close and restored the one instance that had been identified.

CONTRACT ESTIMATES - GENERATE ESTIMATE

- The warning message that pops up whenever Line Item quantities are included for payment that are not marked as "Labor Only" and no materials exist for those Line Items on the Contract Bill of Materials had occurred on every estimate with the original rollout of 6.4. It will occur less frequently now that M&T has been updating the indicator for the true "Labor Only" items.
- The organizational filtering problem that caused all RE's & DCE's to receive notifications for all estimates that failed the "Labor Only" edit has been corrected. The notifications will remain disabled for Construction personnel until a way to determine the line items generating the error message can be identified.

SAMPLING

- Restored logic to automatically fill in the line item on the Sample based on the row selected from the Material Selection pop-up window.
- Restored logic to automatically display the available concrete mixes when the Producer/Supplier has been specified on a Concrete material sample.

REFERENCES - CONCRETE MIX DESIGNS

- REVIEW MIXES: Restored the ability to search by Contract Number.

DOH Vendor Version 6.4.1

- No changes made to this application.
