

# 2026

Highway Maintenance Improvement Program FY 2027-2031 and Needs Assessment

Required by GS 136-44.3

North Carolina Department of Transportation

Division of Highways

## **Background**

Pursuant to N.C.G.S. § 143B-350(f), the Board of Transportation must approve a five-year schedule of state highway maintenance projects and their anticipated costs. This Highway Maintenance Improvement Program (HMIP) is to be published on the Department's website by June 1st of each year. Funding sources for each project in the HMIP are required.

Section 136-44.3A.(c) charges each highway division to determine and report to the Chief Engineer on the need for rehabilitation, resurfacing, and pavement preservation treatments. Effective January 1, 2020, the HMIP was expanded to include bridge and general maintenance. From these submissions, the Chief Engineer shall establish a five-year priority list and schedule for each highway division based on need based upon the preceding fiscal year's appropriation.

## **Highway Maintenance Improvement Plans and Needs**

The Highway Maintenance Improvement Program, or HMIP, is the Department's primary tool for planning asset level investments across the North Carolina highway system. With focus areas including pavements, bridges and other roadway assets, the current 5-year HMIP covers fiscal years 2027-2031. Each highway division has a schedule by county for each plan year within the 5-year plan. The first year is expected to be "firm," reflecting what will be delivered that year.

The HMIP is submitted annually with modifications to adjust years two through five (which will become years one through four) based on changing conditions such as needs and appropriation levels. The process is managed through the Department's Asset Management System (AMS) which is composed of three subsystems: Pavement Management System (PMS); Bridge Management System (BMS); and the Maintenance Management System (MMS). AMS is used to identify potential areas which meet the treatment and funding requirements for inclusion in HMIP. Highway divisions use this data to develop and refine their work plans. Engineers use data from routine condition surveys on all assets to assist in developing their plans.

The HIMP is organized by:

- Pavements
- Routine Maintenance
- Bridges

## PAVEMENTS - HMIP

## Statewide Lane Miles to be Treated in 5 Year HMIP

| Division         | Budget Group   | FY 2027 | FY 2028 | FY 2029 | FY 2030 | FY 2031 | 5-Year Total |
