

NORTH CAROLINA Department of Transportation

How does VMO bring extraordinary value to your everyday needs?

Alyson Tamer, PE, CPM

April 7, 2022

Commonly Used Acronyms

VMO- Value Management Office

CLEAR- Communicate Lessons, Exchange Advice, Record

PCA- Post Construction Assessment

VEP- Value Engineering Proposal

CR- Constructability Review

RAW- Risk Assessment Worksheet

VE- Value Engineering

Five Main VMO Programs

CLEAR Program

Value Engineering
Proposal Program

Risk Assessment
Program

Constructability
Review Program

Value Engineering
Program

What is Value Engineering?

VE is an organized application of common sense and technical knowledge directed at finding and developing alternative ideas that can optimize the cost and performance of a project (add value to a project).

VE Studies Required on Design-Bid-Build projects & CMGC if:

TOTAL project costs* >\$50M
-on or intersecting with the NHS
-Projects without structure(s)

TOTAL project costs* > \$40M
-on or intersecting with the NHS
-Project with Structure(s)

Major Projects
-Anywhere (on or off the NHS)
-TOTAL project costs* > \$500M

*Total Project Costs includes construction, ROW, Utility also if 2 Projects are Let together

VE Study Participant Responsibilities

Attend the VE Study and work through required steps of the Study, mainly identifying and developing ideas.

Work collaboratively

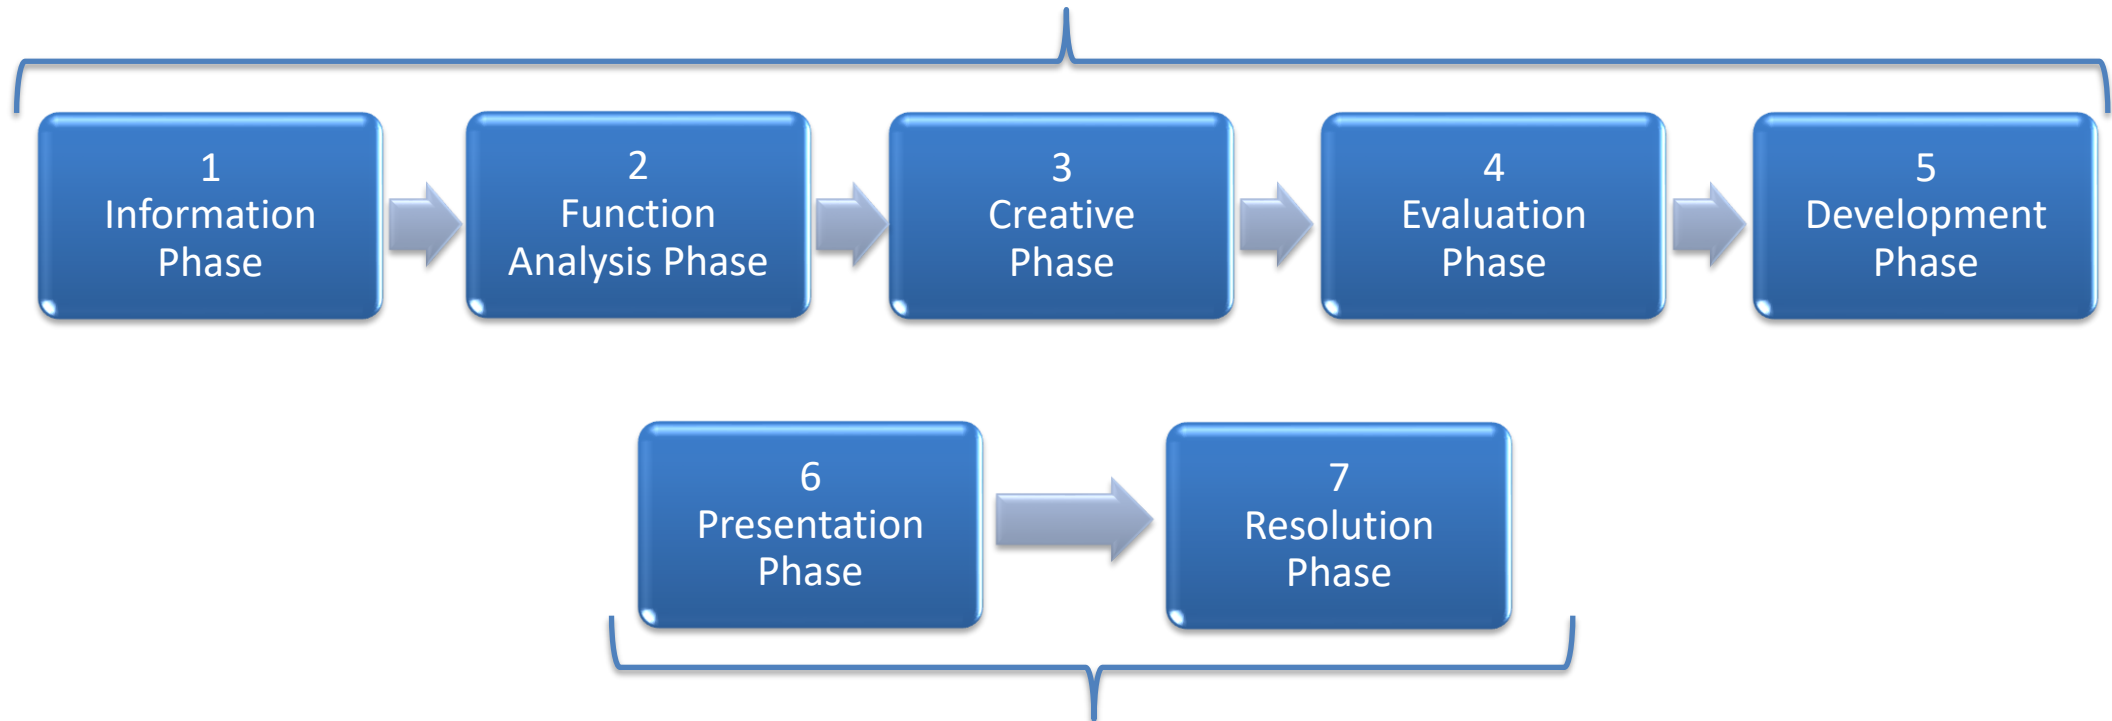

Stay open minded

Consult with the team
facilitator on any
roadblocks encountered

Value Engineering Study Phases

The First 5 Phases are applied during the VE Study

The last 2 phases are at later dates.

Constructability Review Program

Benefits

- Work out potential field issues while the project is still being designed
- Provide collaboration between design and construction
- Provide contractor input on design issues (coordinate with contractors)
- Identify potential cost savings and mitigation strategies to help reduce risk

Risk Assessment Program

Risks are uncertainties that can impact a project

Impacts can be...

Opportunities

Threats

Risk management is a **proactive process** designed to minimize potential obstacles and maximize the ability to capitalize on opportunities.

Risk Assessment Program

1. Risk Assessment Worksheet (RAW)
 - Identify maintenance related risks during design
 - Use it to identify risks in your work
2. Risk Register (CLEAR Database)

Risk Assessment Program

What does CLEAR stand for?

Communicate

Lessons,

Exchange

Advice,

Record

CLEAR is...

Employee Driven
Knowledge Management Program

Knowledge *gathering* and
knowledge *sharing*

CLEAR is a tool for NCDOT

What CLEAR does?

Feedback loops created between regions and units.

Innovations shared and vetted.

Institutional knowledge stored.

Ideas on any topic related to NCDOT.

Approved submissions searched and shared.

Enhanced communication and knowledge share.

Who can submit?

NCDOT Employees with emails can share Lessons Learned In the CLEAR Portal

Welcome To CLEAR

This is the online submission portal for the CLEAR Program, the Department's Internal Knowledge Management Program. This portal is open to all NCDOT employees with an NCDOT email. If this is your first time here or would like a refresher on how the portal and overall program works, please visit the CLEAR Program Connect Page for overview videos and additional background material: [CLEAR Program \(ncdot.gov\)](https://ncdot.gov/clear). We aim to have all submission vetted within 30 days. Please contact the CLEAR team at CLEAR@NCDOT.GOV with any questions. *The practices and ideas shared here represent accepted submissions from NCDOT employees, and do not in any case supersede official procedures, best practices or otherwise approved guidance.*

Search Accepted Lessons Learned and Best Practices Here:

Find an item

ID	Title	Describe the issue, problem, or obstacle you encountered	Applicable Disciplines	Rating (0-5)
6	Lessons Learned	Motorists taking the US 52 SB exit ramp onto SR 1815 had limited sight distance at the top of the ramp due to new guardrail location tied to bridge. Issue was discovered after final acceptance. Maintenance used on call guardrail contractor to reinstall and charged to the project.	Roadway Design; Transportation Mobility & Safety	☆☆☆☆☆ 0
7	Lessons Learned	Firm went out and counted traffic for a traffic analysis. We got the data from third party recommendation and presented the data to the stakeholders at a time that impacted the schedule. We should have come up with the analysis 12 months ago and understand clearly what the stakeholder wanted from the project because the traffic analysis did not meet the needs of the stakeholders. Cause a schedule impact - 12 months of delay due to lack of coordination	Project Management; Local Projects	☆☆☆☆☆ 0
8	Lessons Learned	Bridges with heavy skewes, vertical curves, and/or horizontal curves can end up with reduced cover to the reinforcing steel in the deck due to screeding.	Construction; Structures Management	☆☆☆☆☆ 0
9	Lessons Learned	Traffic control plans required that Phase I of the widening to take place on one side of the roadway. This widening would block the existing drainage systems until Phase II work was completed and obliterated the old system. These locations are distributed throughout the project.	Hydraulics; Work Zone Traffic Control; Roadway Design	☆☆☆☆☆ 0
10	Lessons Learned	Large gaps - Separation of foam from the other at the joints. Any joint above an inch and half is a large gap. The separation occurs in as quickly as four weeks. In an absolute perfect situation, it can last up to a year. It is not cost effective to replace joints once a year or sooner. This causes a maintenance issue. Lane closure costs on both sides. Cones/arrows.	Structures Management; Construction	☆☆☆☆☆ 0
11	Lessons Learned	Contract surveying was left out of project tasks (grey area). Planning phase should have had contract surveying. On this project utilities were deep and drainage was deep; utilities were a nightmare on this project. Utilities were located but were not picked up, so many utilities out there and they were stacked. There were abandoned lines.	Utilities Projects; Project Management	☆☆☆☆☆ 0
12	Lessons Learned	The existing 15" drainage pipe was not in the location as noted on the plans. The new drainage structure could not be placed until a redesign was done for the existing drainage pipe. Contractor had to wait for a redesign and overrun on pipe quantities	Project Management	☆☆☆☆☆ 0
		No Traffic Control planning to address drainage design.		
13	Lessons Learned	Lack of construction easement as well prevented contractor from having adequate space to work. Had to utilize steel plate covers and message boards to work in lanes.	Project Management	☆☆☆☆☆ 0

Value Management Office

The Value Management Office (VMO) has five programs that are focused on enhancing project delivery at every phase of a project's life. The programs work to bring innovation to NCDOT projects and engage the Department to share ideas and knowledge.

[Home](#) > [Connect NCDOT](#) > [Projects](#) > [Value Management](#)

CLEAR Program

The CLEAR Program collects lessons learned, innovative ideas, and best management processes to be shared throughout the Department.

[Read More](#) →

Constructability Review Program

The Constructability Review Program reviews projects during development identify, examine, and resolve constructability challenges through a partnership with the AGC.

Sign-up for Notification of upcoming PCAs [here](#).

Sign-Up for Notifications of upcoming Lunch and Learns [here](#).

Post Construction Assessments

The Post Construction Assessments (PCA) are conducted on selected projects following substantial completion of the project. The PCA process brings together the design team, NCDOT personnel, and industry partners to share lessons learned and best practices related to the construction of these projects. The lessons learned and best practices are shared across various NCDOT Divisions and Units to improve out

A map of all projects that will have a Post Construction Assessment is available at: <https://arcg.is/1iGzSj>

If you have any questions on the Post Construction Assessments please contact the Value Management Team at CLEAR@NCDOT.GOV.

[US 19 \(C203358 - R-2519B\)](#)

Post Construction Assessment (PCA) Request Form

Fill out this form if you have a project that you would like the Value Management Office to facilitate a Post Construction Assessment (PCA).

To see previous Post Construction Assessments look under Projects on this page and click the tab - Completed Assessments.

PCAs on projects can be conducted at substantial completion with no outstanding claims or contract issues. They include the contractor, design teams, and NCDOT personnel.

The Submitter Information at the beginning of the form is for follow up purposes so we can contact you regarding scheduling the PCA. This section should be completed by the person completing the form. The place to enter the additional contact information for other project personnel involved is later on in the form.
