

Bridge Preservation Selection Tool for Interstate Maintenance Funding

The Interstate Bridge Preservation Selection Criteria worksheets and supporting documentation were developed to assist Divisions in their systematic selection process. The Selection Criteria worksheets are separated by deck, superstructure, substructure and miscellaneous bridge preservation activities.

Each worksheet contains general and eligibility requirement sections as well as specific preservation activity sections. This tool assists in evaluating candidate projects. The bridge preservation selection tool is designed to compare candidate projects by individual bridge components. For example, the tool allows for two deck preservation projects to be compared against each other; however, it cannot compare a superstructure preservation with a substructure preservation activity.
