

APPENDIX E. NOISE WALL/RETAINING WALL CLEARANCES

of the

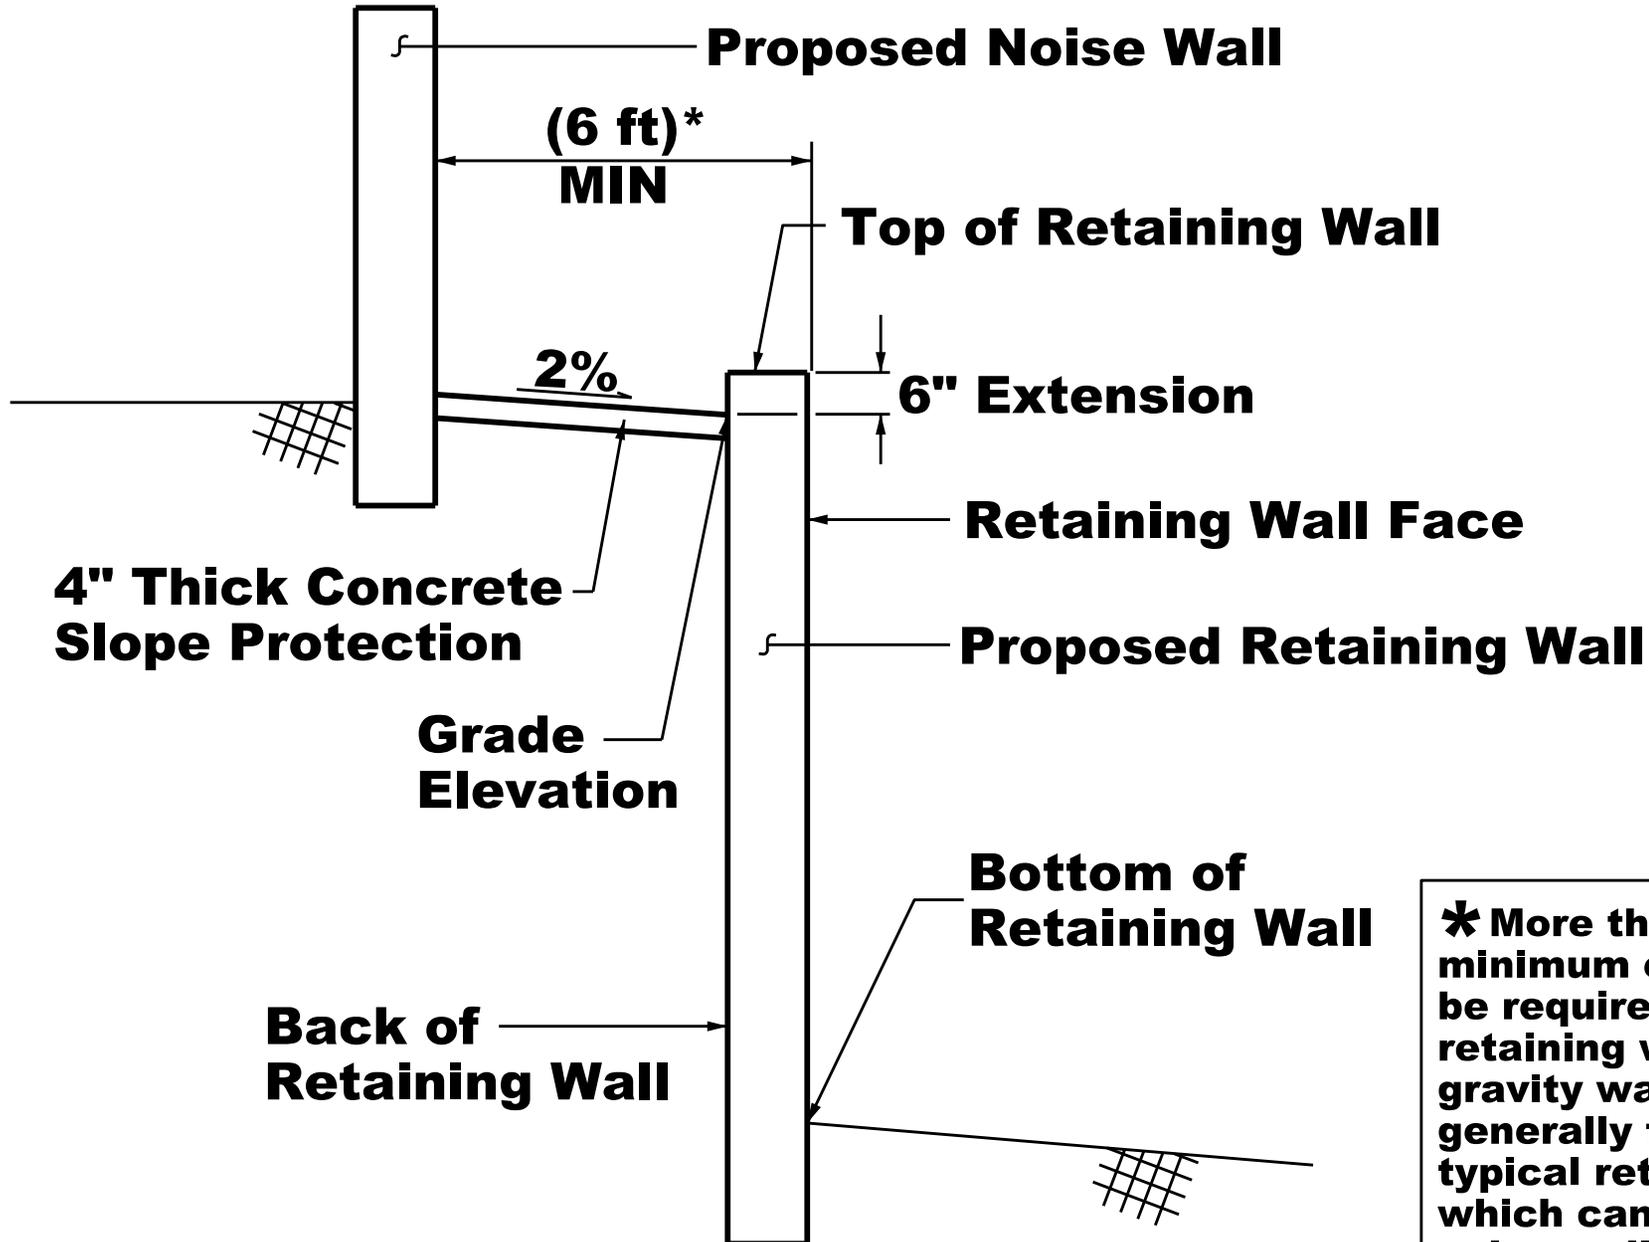

TRAFFIC NOISE MANUAL

North Carolina Department of Transportation
Traffic Noise and Air Quality Group

Noise Wall/Retaining Wall Clearance Requirement

(May not apply to cantilever concrete retaining walls due to potential for interference between cantilever wall and noise wall foundations.)

*** More than a 6 ft minimum clearance may be required for gravity retaining walls because gravity walls are generally thicker than typical retaining walls which can interfere with noise wall foundations.**
