The Honorable Sean Duffy
Secretary of Transportation
U.S. Department of Transportation
1200 New Jersey Avenue, S.E.
Washington, DC 20590

Dear Secretary Duffy:

On behalf of Ashe County, I am pleased to express our strong support for North Carolina Department of Transportation (NCDOT)'s **NC 88 Mountain Corridor Resilience and Stabilization Project** ("the Project"), submitted to the U.S. Department of Transportation's FY 2024-2026 Promoting Resilient Operations for Transformative, Efficient, and Cost-saving Transportation (PROTECT) Grant Program.

The Project will modernize and fortify a highly vulnerable 3.76-mile mountainous section of NC 88 stretching from the NC 194 intersection in Smethport to the NC 194/NW School Road intersection in Warrensville. Located in the flood-prone Blue Ridge Mountain region, this critical corridor suffers from sharp curves and severe structural vulnerabilities to flooding along Buffalo Creek. The proposed project will replace two critically at-risk bridges over Buffalo Creek which were built in 1949 and are now rated as in poor condition (4 out of 10). The Project will also implement curve realignments, construct systemic drainage improvements, and add 5-foot paved shoulders along with a modern roundabout.

The NC 88 corridor serves as a primary logistics, economic, and emergency service spine for northern Ashe County. It serves rural residents, agricultural commerce, and local school bus routing. However, the existing infrastructure is not equipped to handle the intensified, severe weather events impacting the Appalachian high country. This was evidenced during Hurricane Helene, when full and partial closures of the roadway reduced the redundancy and reliability of the emergency transportation network serving the community. In rural mountainous areas, where alternate routes are limited, the loss or degradation of this primary transportation corridor could substantially increase emergency response times and create additional operational risks for both responders and the public. Widening the road, improving the horizontal alignment and providing paved shoulders will improve safety. The project also involves numerous rock cuts with soil nail walls that will stabilize the mountains above the road.

County of Ashe

From Ashe County's perspective, the resilience of NC 88 is particularly important because of the corridor's role in connecting the communities of northern Ashe County to the countywide transportation and emergency response network. The impacts experienced during Hurricane Helene demonstrated how quickly damage to a single mountain corridor can affect residents, businesses, agricultural operations, school transportation, and the ability of emergency personnel to move throughout the community. With limited alternative routes in this rural portion of the county, maintaining reliable access along NC 88 is essential not only during severe weather events, but also for the day-to-day movement of people, goods, and services. Strengthening this corridor will provide greater reliability for northern Ashe County while improving the county's ability to maintain access and emergency connectivity when other portions of the transportation network are disrupted.

Thank you for your consideration of NCDOT's PROTECT grant application, which will transition a crucial rural artery into a storm-resilient corridor engineered to withstand severe inland precipitation and safeguard mountainous supply lines.

Sincerely,

Nick Farmerie
Assistant County Manager/ Community Development Director
Ashe County
