Memorandum

Subject: NCDOT Raise Grant-iBragg

Per your request, I have prepared a crash summary and crash and injury reduction analysis for the various routes included within this project in the vicinity of Fort Bragg in North Carolina. This project includes multiple routes that serve traffic in and around the Base known as the range roads. The project scope includes modernization of roadways to improve features such as drainage, pavement structure, pavement/shoulder widening, shoulder clearing/mowing, signage upgrades, guardrail upgrades and pavement resurfacing.

Raw crash data for this analysis was provided by the Onyx Group and included a tabular listing by segment (see attached). The tabular crash information is summarized below in Map 1.

Map 1 Crash Summary Map

NCDOT was consulted concerning the crash reduction factors for a scope including pavement resurfacing and modernization. The NCDOT provided a crash reduction factor for road modernization that is intended to capture improvements similar to the scope of this project. The provided factor, which represents a 20% reduction in crashes and injuries, is a planning level factor used to help inform decisions at the project planning stage concerning safety benefits.

The methodology used to capture crash benefits included applying the safety benefit factor for roadway modernization to the existing crash history provided by the Onyx Group/Fort Bragg to yield crashes per year reduced as well as injuries per year reduced. The crash history included 5 years of data between December 1, 2015 and November 30, 2020. Table 1 below shows the total number of crashes and the severity distribution among all recorded crashes as well as the total number of crashes per year reduced by this project.

Table: 1 Crash Severity Summary

Crash Severity Summary (5 Years of data- December 1, 2015 to November 30, 2020)	
Severity	Number of crashes
K-Killed	6
A-Incapacitating	38
B-Non-Incapacitating	62
PDO-Property damage only	279
Total number of crashes	385
Crashes reduced per year (20%)	15.4

Table 2 below summarizes the Injury reductions per year as well as the crash cost savings per year for each severity that are associated with the upgrade of the roadway segments. This project will provide an estimated 4.05-million-dollar savings in crash costs per year which is a significant savings in dollars but also represents significant crash injury and costs reductions.

Table 2: Crash Cost Summary for all segments

Crash Cost Summary				
Severity	Number of injuries	Reduction per year (20%)	Cost Per	Savings per year
K-Killed	6	0.24	\$10,900,000	\$2,616,000
A-Incapacitating	38	1.52	\$521,300	\$792,376
B-Non-Incapacitating	62	2.48	\$142,000	\$352,160
U-Injury (severity unknown)	26	1.04	\$197,600	\$205,504
PDO-Property damage only (per vehicle)	465	18.6	\$4,500	\$83,700
Total Injuries (Incl. K)	106	4.24	Total/year	\$4,049,740

Finally, the table of the raw crash data as provided by The Onyx Group and Fort Bragg, is attached for reference if needed.

If you should need additional information concerning the safety data associated with the Range Roads, please do not hesitate to contact me.
