SECRETARY

August 31, 2017

Dear Traffic Survey Customers,

The Traffic Survey Group is pleased to announce that our newest Annual Average Daily Traffic (AADT) map product has been released on ESRI's ArcGIS Online (AGOL). This is our second year providing this map product on AGOL and believe it is a great resource for our customers. The NCDOT AADT Mapping Application contains AADT data from our recent 2016 data collection along with any available historical values dating back to year 2002.

The great news about the NCDOT AADT Mapping Application is that all customers, internal and external to NCDOT, may access this map product through a web browser or use the Explorer app on their mobile device. The NCDOT AADT Mapping Application is our recommended application for viewing AADT data. This resource displays a point and a line layer containing data associated with our collected traffic monitoring coverage count stations and the line segments referenced to these collection points. At increasing scales, greater levels of detail and labels are drawn and displayed. When viewing this resource, customers are able to:

- Search for location based on address, city or county
- Select/filter by identified station attributes
- Identify a point or segment to see full AADT and truck statistics, respectively
- View the attribute table, map legend, and layer list
- Zoom in/out and pan in any direction
- Measure area and linear distances on the map
- Change background base map
- Print a map image to PDF or JPG format

The NCDOT AADT Mapping Application product web link and our other product information and resources are accessed on our new Traffic Survey website:

<https://connect.ncdot.gov/resources/State-Mapping/Pages/Traffic-Volume-Maps.aspx>.

Traffic Survey is excited about this product release and how much easier it will be for our customers to access AADT data. We look forward to continuing to provide this as part of our annual publication.

Sincerely,

Steve Piotrowski
Data Systems Engineer
