# Pay Item Utility Version 2

There is a new version of the Pay Item Utility that requires the user to pick the specific pipe type when you are filling out the Geopak Drainage dialog. This will prevent the Pay Item Utility from asking you every pipe type and should be better since you know what the pipe type should be when you place the link in drainage.

The Original Pay Item Utility will be maintained for older projects, but use Version 2 for new projects. Select the appropriate Pay Item Utility Version from the Hydro Tools menu as shown below:

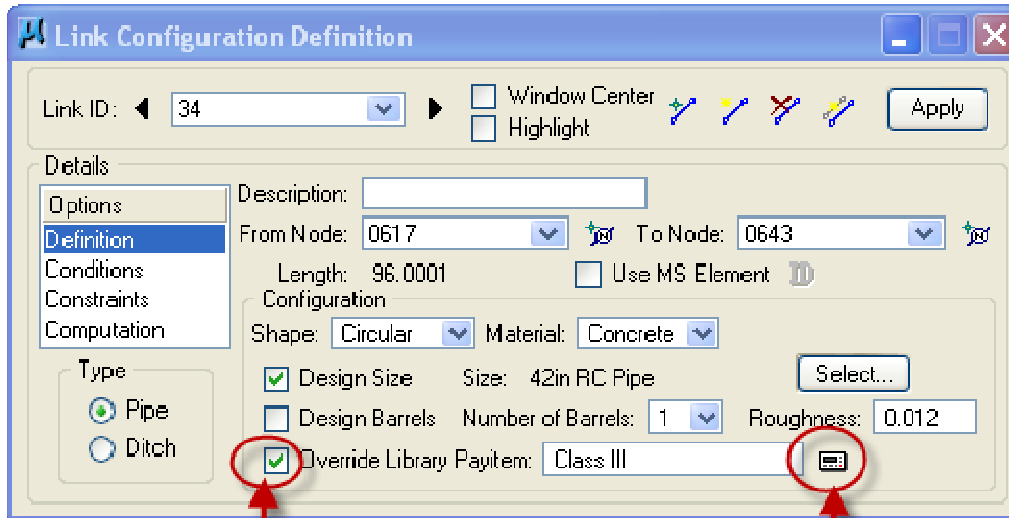

Setting your Preferences

Make sure that you have selected the correct DDB file under:
Geopak Drainage>Project >Preferences>Project Components

You will find the file: hydraulics payitems.ddb at
C:\NCDOT_V8_WORKSPACE\HYDRAULICS_STDS\Standards\data

Selecting the Pipe Type

Turn on Override Library Payitem

Click on the database button

Then choose the correct Pipe Type.
