

Inlet and Storm Drain Computation

2 Methods have been developed.

Method 1: is preferred but will only work if the Drainage File is new enough to have all the Item Types. Otherwise, data rows will be incomplete. The spreadsheet is in the workspaces and the instructions can be found in the Youtube video found [Here](#). Additional videos will be added later to explain how to “Assign” missing Item Types.

Method 2: is the original excel spreadsheet that can be found as part of this zip folder. The instructions are included in the excel spreadsheet. This method requires you to cut and paste from the Drainage Flextables.
