- Under Drawing Production Tab, choose the Element Annotation in the Annotation Ribbon

Choose Annotate Element •

- Make sure all Elements are turned off.
- Turn on Override Annotation Group .
- Select the "..." and choose plan .

•

- Path to either the NCDOT HYD STATION SAG LABEL or NCDOT HYD STATION CREST LABEL
- Accept (left click) the Annotation Group

.

- Then "Locate Elements Reset to complete" In other words...choose the alignments you want to the Sags labeled and then Right click to accept.
- At that point the labels should be placed
- You may want to do one or two alignments at a time until you get used to it.
- You will need to repeat the steps for the Crest
- I have preset the text style, color, and level. In addition, I set how far from the alignment it will be placed. If necessary, I can include instruction on how you can edit the Annotation Group in your file to let you change the constraints.
