NORTH CAROLINA TRAFFIC FATALITIES CONTINUE FIVE-YEAR DOWNWARD TREND

A MESSAGE FROM THE COMMISSIONER

North Carolina traffic fatalities declined one percent in 1991, claiming 18 fewer lives than the year before. It was the fifth consecutive year in which accidents, fatalities and injuries continued to decrease on the state's highways, but there are signs that the five-year downward trend that began in 1987 is leveling off. One reason is that the number of motor vehicles on our highways is increasing each year. In 1991, North Carolina's census of motor vehicles grew by 24,512 cars and trucks. Another reason is that drivers continue to violate one or more traffic laws in 83 percent of all accidents. Speeding remains the leading violation involved in North Carolina fatal accidents.

Fortunately, automobiles are larger and safer than they were a decade ago. About one-third of all vehicles manufactured in 1990 were equipped with driver-side air bags, longer wheelbases and stronger door latches. It is estimated that by the 1996 model year, at least nine out of every ten new cars will be equipped with air bags, most on the passenger as well as the driver side. Used in conjunction with lap and shoulder belts, air bags provide the most effective crash protection available, often preventing fatalities and serious injuries to front seat occupants. North Carolina's goal is to achieve 70 percent safety belt use by the end of 1992.

In 1991, North Carolinians reported 161,020 traffic accidents involving one out of every 20 licensed vehicles and one out of every 16 drivers in the state. The total number of accidents and injuries in 1991 represented a three percent decline from the previous year, and compares to a nine percent decrease in accidents and a four percent drop in injuries in 1990. While we welcome the continued decline in accidents, fatalities and injuries, the traffic accident toll on North Carolina's highways remains unacceptably high.

As we head into another year, let's remember that our highways are becoming increasingly crowded with more vehicles and drivers. This means that each of us has the responsibility to drive safely and defensively, obey the speed limits, avoid the use of alcohol and drugs, and always use our seat belts. Make every trip a safe one for yourself and others.

LEGEND:

O—No Injury.

C—Complaint of pain without visible signs of injury or momentary unconsciousness.

B—Other visible injuries such as bruises, swelling, limping or any painful movement.

A—Bleeding members, distorted member or any condition that required victim to be carried from the scene.

K—Killed.

Based on *reportable* accidents only, and excludes those vehicle types for which belt status is not meaningful (i.e., motorcycles, mopeds, bicycles, and pedestrians). Cases where extent of injury or belt usage is unknown or unable to be determined are excluded. "Belt" includes these categories: lap belt, lap and shoulder belt, and child restraint. Information includes data for the period January 1 through December 31, 1991.

Note: Belt use is the use reported by the investigating officer. There is evidence that this *reported* belt use rate exceeds the actual use rate. During 1991, the *observed* driver belt use rate in North Carolina was just over 60 percent.
