

GUIDELINES FOR INSTALLING THE FOLLOWING SIGNS:

“Deer Crossing” sign (W11-3)

This sign can be erected at locations when the investigating traffic engineer determines a site to be a frequent deer crossing and/or an accident location involving deer. Signs normally would not be installed in subdivisions or on unpaved roads due to slow speeds and local traffic. *Consideration of the engineering study may include; but not limited to: traffic volumes, approach speeds, street width, sight distance, road geometry, and accident history.*
