2									
3									
4									
5									
6									

Specify Size of Panel Required (see note below): _____

Note: When determining size for the Logo sign, use the following guideline:

For new projects where no existing businesses are currently participating at the interchange for that service type, use the 3 panel design when 3 or less businesses will potentially participate at the completion of the Logo project. If it is known that additional businesses for a service type will exist within a year, the Logo Coordinator or Project Engineer may request the 6 panel sign with a brief explanation below the list of businesses. Use 6 panel design when more than 3 businesses will potentially participate at the completion of the Logo project. For upgrade projects, we should only upgrade to the 6 panel design when necessary to accommodate a qualified requesting business, i.e.. when a 4th qualified business has requested participation for that service.

Sketch the interchange below if desired:
