

[TE-PS-19] TEMPORARY SIGNS FOR SPECIAL EVENTS

A special event is defined as one that attracts a large volume of traffic in short periods of time that cannot be effectively and safely handled by the existing permanent traffic control devices.

Temporary traffic control devices necessary to safely handle the anticipated traffic shall be furnished, erected, maintained and removed by the DOH. If a determination is made by the State Highway Administrator that temporary devices are not warranted, the NCDOT will not permit others to place such devices within the right of way of the State maintained highways.
